Conclusion

How big has the stock-token market become?

Tokenized stock value grew nearly sevenfold in 2026

Tokenized stocks and equity ETFs grew from **$502M** at the end of 2025 to **$3.47B** on September 30, a **592%** increase. Investors have more ways to access the same stocks, but ownership rights, trading costs and onchain uses differ across platforms.

Market Summary

More companies now bring public-stock exposure onchain, but the token a buyer receives depends largely on the provider. Some products give investors a **claim** linked to shares held in custody, where **issuer-sponsored** products put the company's share itself onchain. Those differences affect ownership rights, where the token trades and how an investor can redeem.

Report Scope

Market charts cover stock and equity-ETF tokens. The five platforms in focus hold **91.7%** of tokenized stock value at September 30. rTokens by Reality, Backpack, Dinari and Coinbase remain in the wider comparison. The report covers spot trading and DeFi use; it excludes perpetuals, options and non-equity assets.

Platforms in focus

Ondo

Ondo Global Markets offers tokens backed by public stocks and ETFs. Eligible investors can mint and redeem through Ondo; supported chains and third-party venues extend trading access.

xStocks

Backed Assets (JE) issues stock-backed securities. Kraken trades xStocks and acquired Backed in January 2026; other venues also distribute the tokens.

bStocks

BTech Holdings, a Binance affiliate, issues share-backed certificates. Binance offers spot trading, and holders can withdraw the tokens to BNB Chain.

Securitize

Securitize offers company-issued shares and, from October 8, stock-backed entitlements. Entitlements retain dividends and applicable votes; registered ownership requires conversion.

Robinhood Stock Tokens

Robinhood Assets (Jersey) issues debt securities backed by shares. They provide economic exposure, not ownership of the underlying company's stock.

Others

Source: Token Terminal; DefiLlama (EXOD); issuer documentation; Securitize October 8 announcement. Market cutoff: September 30, 2026 close. Value uses reported circulating balances; stock and equity-ETF tokens only.

Same stocks, different instruments and markets

As more platforms offer the same stocks, price exposure becomes easier to **commoditize**. Their tokens remain separate claims that trade in separate markets, so platforms compete to bring in buyers, provide a liquid exit and make the tokens useful in DeFi.

1 The early leaders gave up share. Ondo and xStocks held **94.1%** of tokenized stock value in January; their combined share fell to **51%** by September 30.

2 The same ticker does not guarantee the same product. Tokens tracking the same stock can have different issuers, structure and routes back to cash or shares.

3 Robinhood holds **4.2%** of tokenized stock value but generated **45.6%** of September spot DEX trading.

4 Token Terminal records about half of Coinbase and Robinhood's token value at covered DeFi protocols. xStocks holds the most deposited dollars at **$90.8M**, versus Robinhood's **$74.9M**.

5 Trading extends beyond US regular hours. In September, Kraken handled 50.1% of spot trading value outside those hours; Binance handled 54.2%. Separately, an estimated 73.4% of Robinhood Chain stock-token swap transactions occurred outside US regular hours.

Source: Token Terminal; DefiLlama (EXOD); Kraken; Binance; Robinhood Chain RPC; NYSE. September 1–30, 2026. Kraken and Binance hours measure trading value; Robinhood Chain hours estimate swap-transaction counts. DeFi covers indexed protocols.

The same ticker does not guarantee the same product

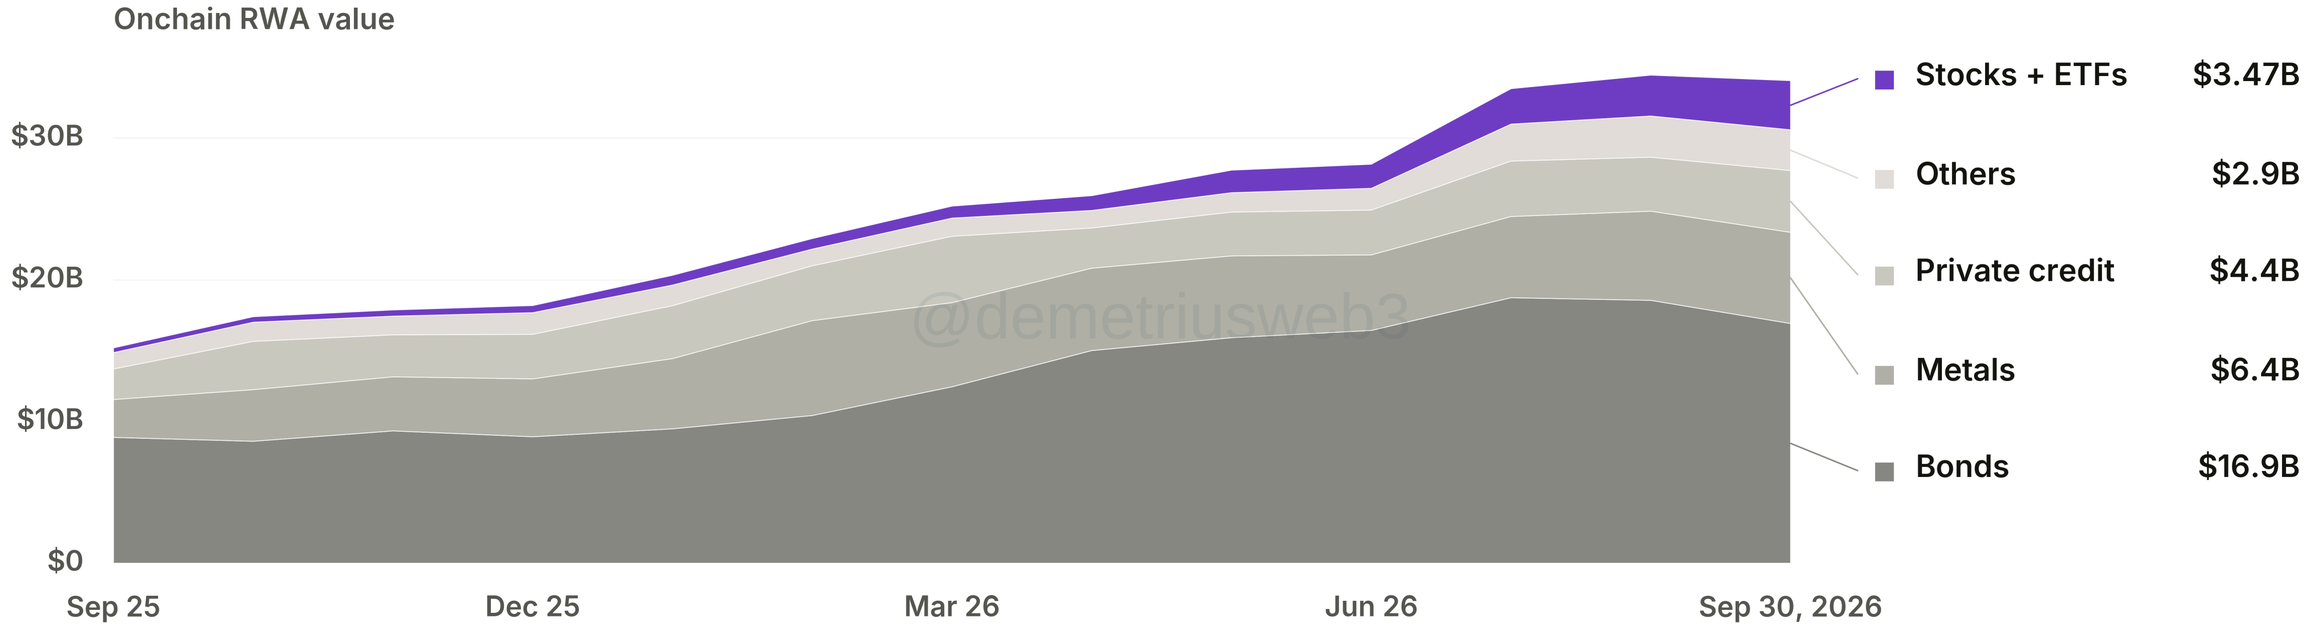
Matching price exposure does not give you matching rights. Check who issues the token, what you own and how you can sell or redeem.

Platform	Issuer / operator	Product & ownership	Who can buy / where	How you exit	24/7 trading
Ondo	Ondo Global Markets (BVI) Limited	**Secured tracker note** Price exposure No shareholder rights	Eligible non-US Ondo, exchanges and DEXs	Sell on a venue Issuer redemption after KYC	**Yes - secondary markets** Redemption hours vary
xStocks	Backed Assets (JE) Limited	**Share-backed debt certificate** Price exposure No shareholder rights	Eligible non-US Kraken, exchanges and DEXs	Sell on a venue Direct redemption after KYC ($5k minimum)	**Yes - supported venues** Issuer operates 24/5
bStocks	BTech Holdings Limited	**Share-backed certificate** Price exposure No shareholder rights	Eligible non-US Binance and BNB Chain	Sell on a venue Issuer redemption / conversion subject to eligibility	**Yes - Binance spot** and onchain markets
Securitize	Share issuer / Securitize Markets, LLC	**Registered share or entitlement** Dividends + applicable votes Conversion to shares where available	Eligible US / EU and others Identity checks required	Sell via Securitize Convert entitlements to shares where available	**Entitlements: extended hours** 24/7 is planned
Robinhood Stocks	Robinhood Assets (Jersey) Limited	**Share-backed debt security** Price exposure No shareholder rights	Eligible non-US Wallets and supported venues	Sell on a venue Issuer redemption after KYC if no intermediary is available	**Yes - onchain markets**
Coinbase	Coinbase Onchain SPV Ltd.	**Share-backed trust certificate** Beneficial claim on shares Not registered share ownership	Eligible non-US Base wallets and DEXs	Sell on a DEX Direct redemption for approved institutional partners	**Yes - onchain markets**
Backpack	Trek Nexus Markets Ltd. (or issuing affiliate)	**Trust-backed token receipt** Rights through Backpack Limited direct issuer rights	Eligible non-US Backpack and Solana wallets	Return tokens to Backpack Convert to brokerage security entitlements	**Yes - onchain markets**
rTokens	BG El Salvador, S.A. de C.V. (or series issuer)	**Unsecured debt instrument** Contractual price exposure No shareholder rights	Eligible non-US Bitget and Bitget Wallet	Sell on a venue Redemption under issuer terms	**Selected wallet tokens: 24/7** Bitget spot: 24/5
Dinari	Dinari, Inc.	**Share-backed contractual token** Economic rights after KYC No share ownership / voting	Eligible non-US KYC-enabled partner platforms	Sell where supported Issuer cash repurchase after KYC	**Selected onchain tickers: 24/7** Broader access: 24/5

Source: Ondo; xStocks; Binance; Securitize (announcements and SEC submission); Robinhood; Coinbase; Aave; Backpack; Reality; Bitget; Bitget Wallet; Dinari - official terms, FAQs and documentation. Checked October 9, 2026; market data cutoff September 30. KYC = identity checks. Rights and access vary; 24/7 trading does not guarantee continuous redemption.

Stock tokens rank as the fourth sector among RWAs

Stocks and equity ETFs added **$2.97B** in 2026, second only to bonds. Their **$3.47B** in tokenized value represents **10.2%** of the wider RWA comparison.



RWA sector	Value, Sep 30 2026	2026 growth	Past 12 months
Bonds	$16.92B	90%	91%
Precious metals	$6.44B	58%	141%
Private credit	$4.36B	39%	102%
Tokenized stocks + ETFs	$3.47B	592%	947%
Others	$2.87B	88%	149%

Source: Token Terminal; DefiLlama. September 30, 2026 provider observations: stock segment at September close, other RWA sectors from DefiLlama daily records. EXOD uses DefiLlama. Excludes stablecoins and governance tokens.

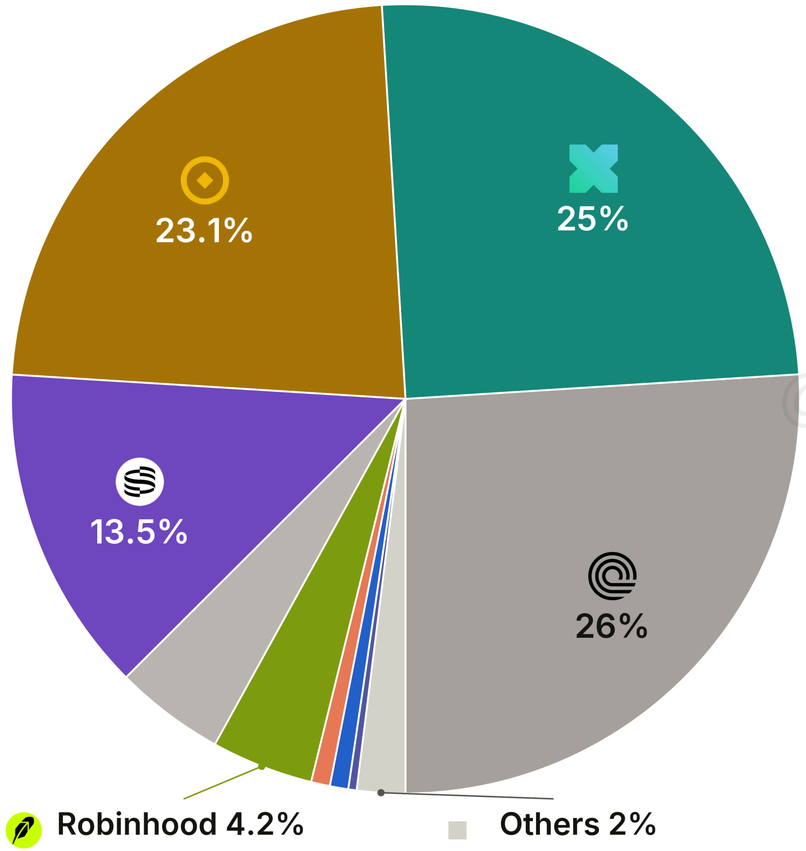
Conclusion

Who added value, and how do the products differ?

Five platforms in focus hold 91.7% of tokenized stock value

Ondo and xStocks together hold **51%**. bStocks, Securitize and Robinhood bring the five-platform share to **91.7%**; Securitize's three company-issued shares offer a different product from the multi-stock wrappers.



Platform	Value	Share
Ondo	$902.4M	26%
xStocks	$866.6M	25%
bStocks	$800.7M	23.1%
Securitize	$467M	13.5%
rTokens	$156.4M	4.5%
Robinhood	$145.1M	4.2%
Backpack	$26.8M	0.8%
Coinbase	$26.2M	0.8%
Dinari	$11.9M	0.3%
Others	$68.6M	2%

Securitize lets companies issue their own shares onchain.

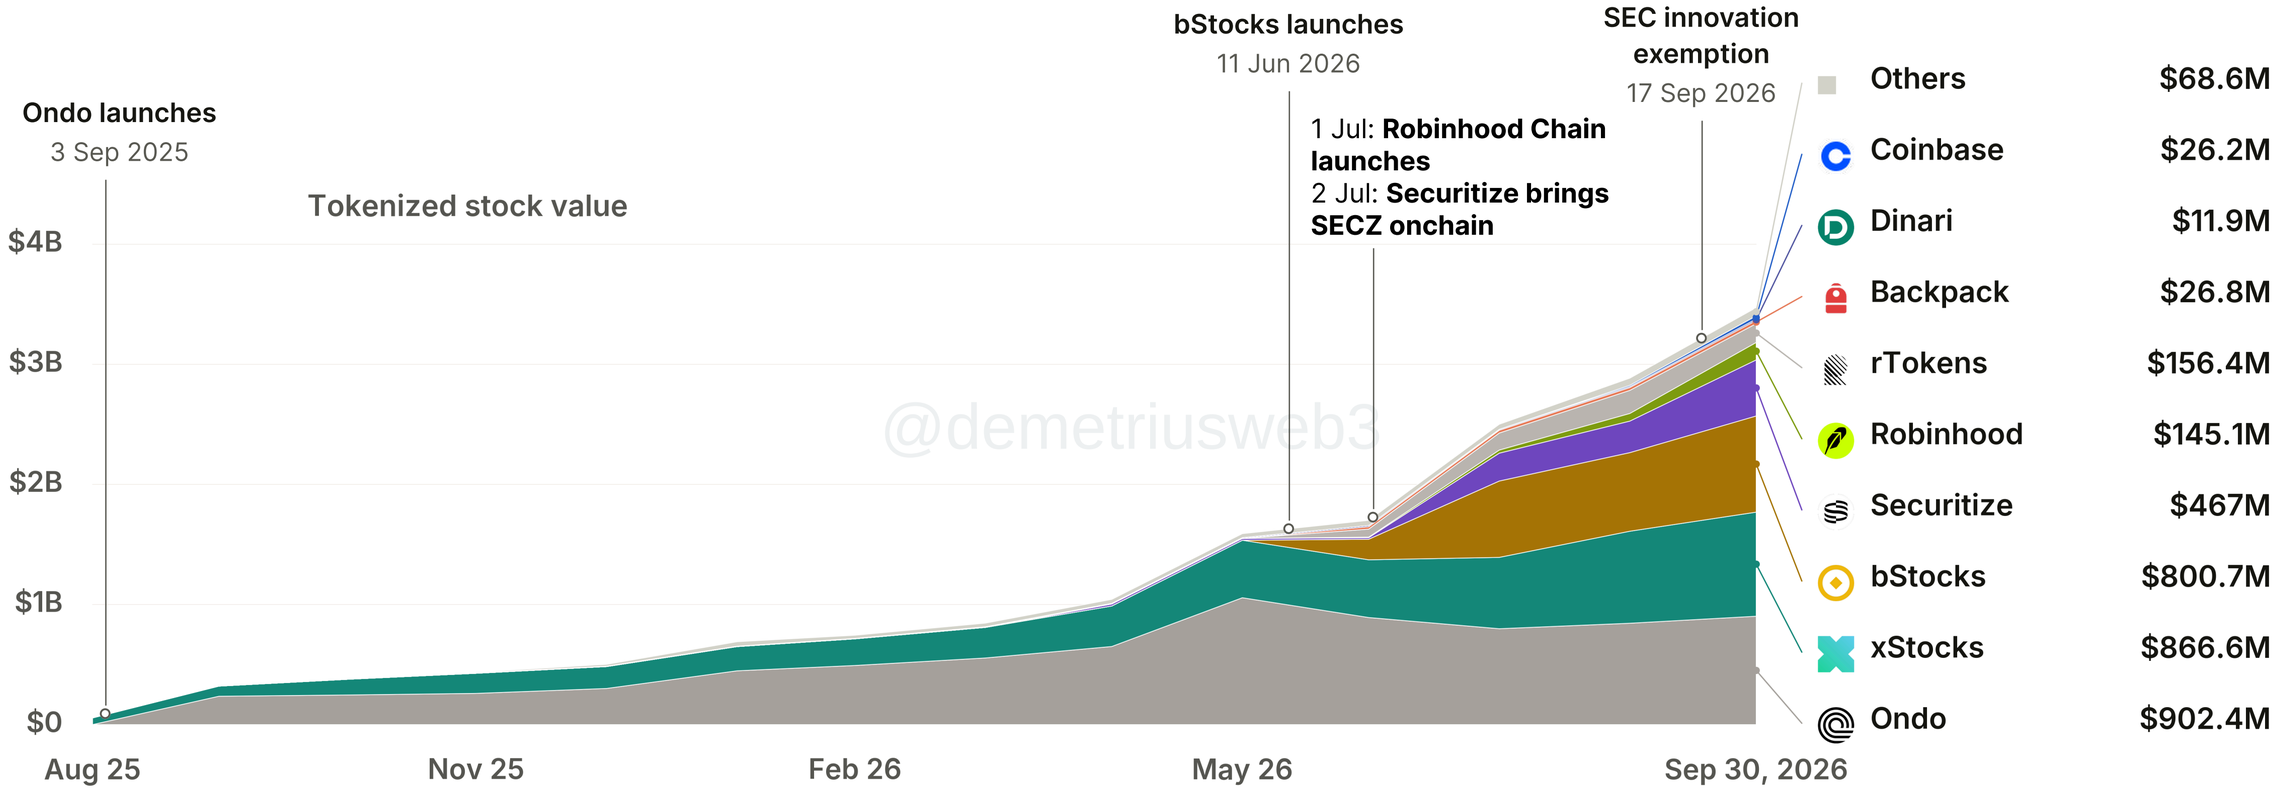
On October 8, it expanded into third-party, share-backed security entitlements. Those new products are excluded from the September 30 figures.

Source: Token Terminal; DefiLlama (EXOD); September 30, 2026 close. Value uses reported circulating balances. Stock and equity-ETF instruments count once across chains; technical wrappers count with their base.

@demetriusweb3

Tokenized stock value reached $3.47B as more platforms gained scale

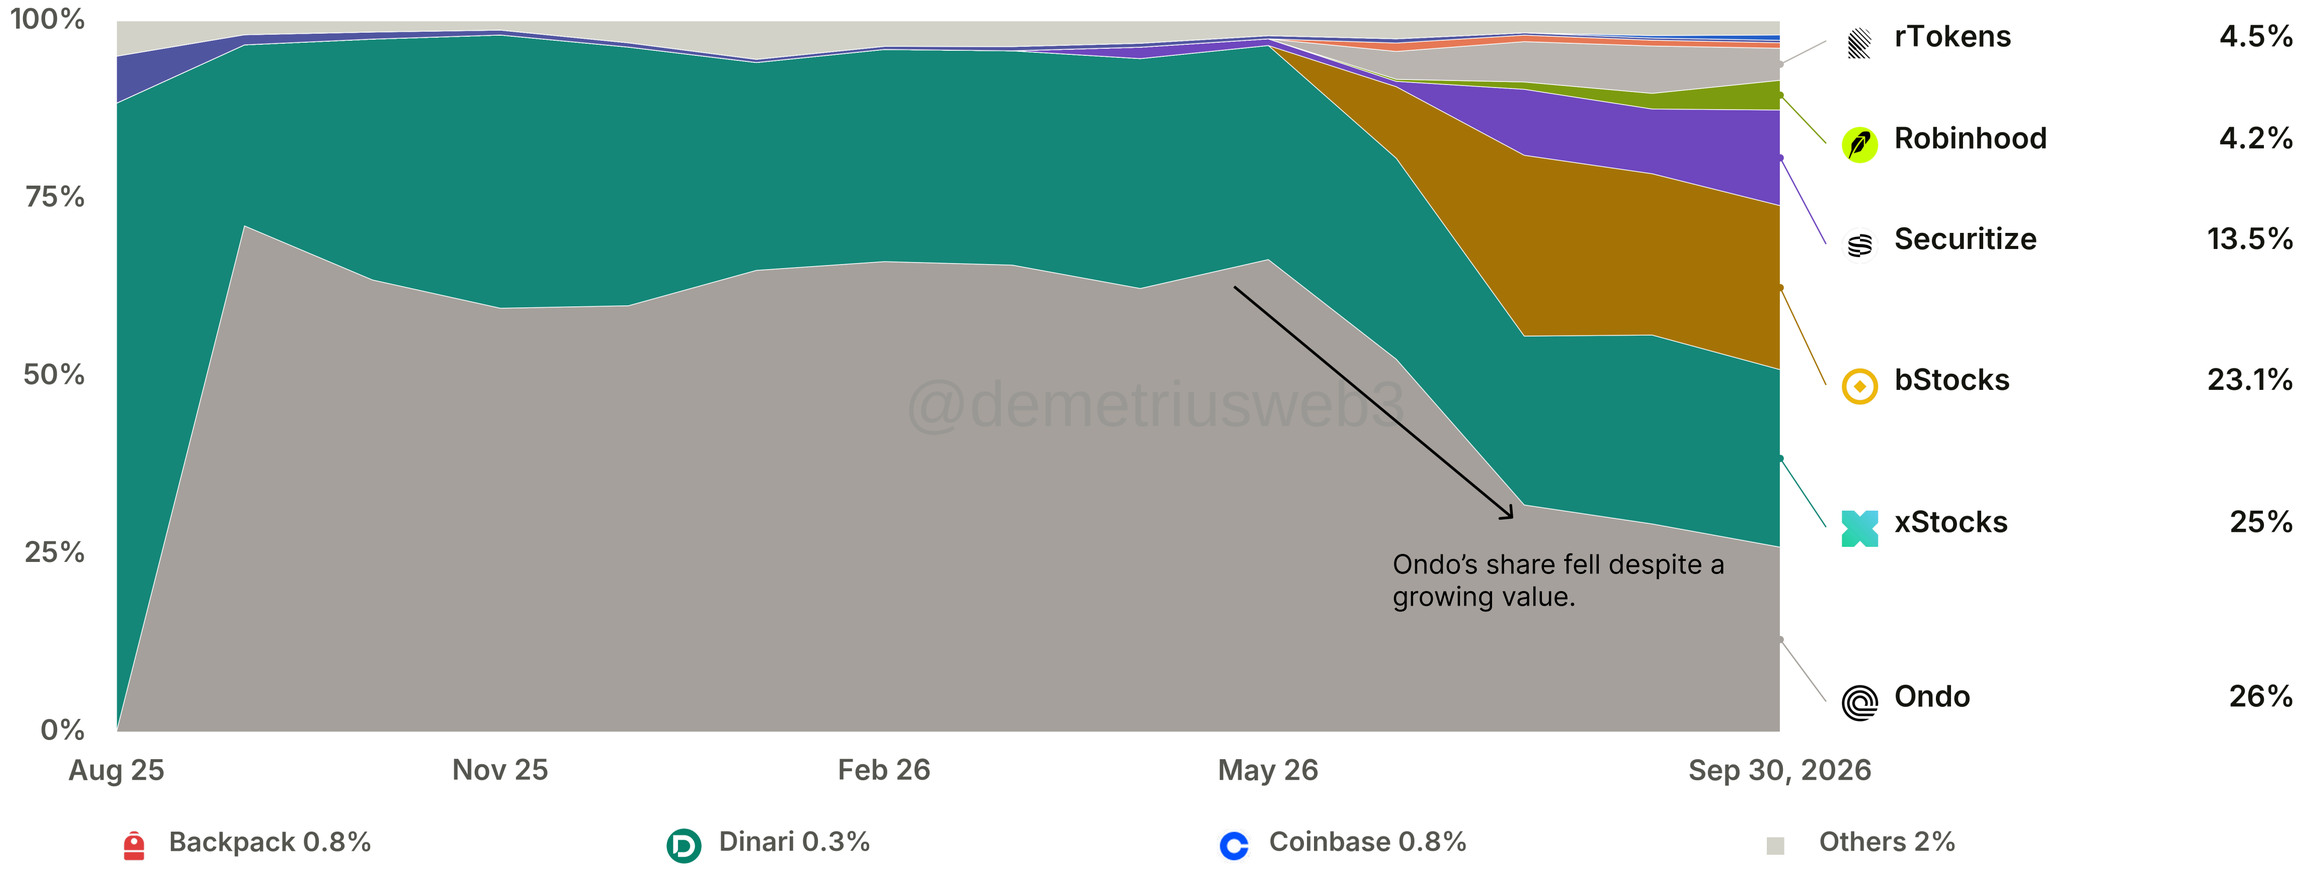
Tokenized stock value grew **55×** from August 2025 to September 2026. bStocks and Securitize now hold **$1.27B** combined, widening the market beyond Ondo and xStocks.



Source: Token Terminal; DefiLlama (EXOD); Alpaca; Binance; Robinhood; Securitize; SEC. September 30, 2026 close. Month-end token value uses reported circulating balances. Event dates do not establish what caused growth.

Tokenized stock value spread across more platforms and legal structures

Ondo and xStocks' combined value rose **2.7×** from January, but their share fell from **94.1%** to **51%**. bStocks and Securitize now account for **36.5%**.

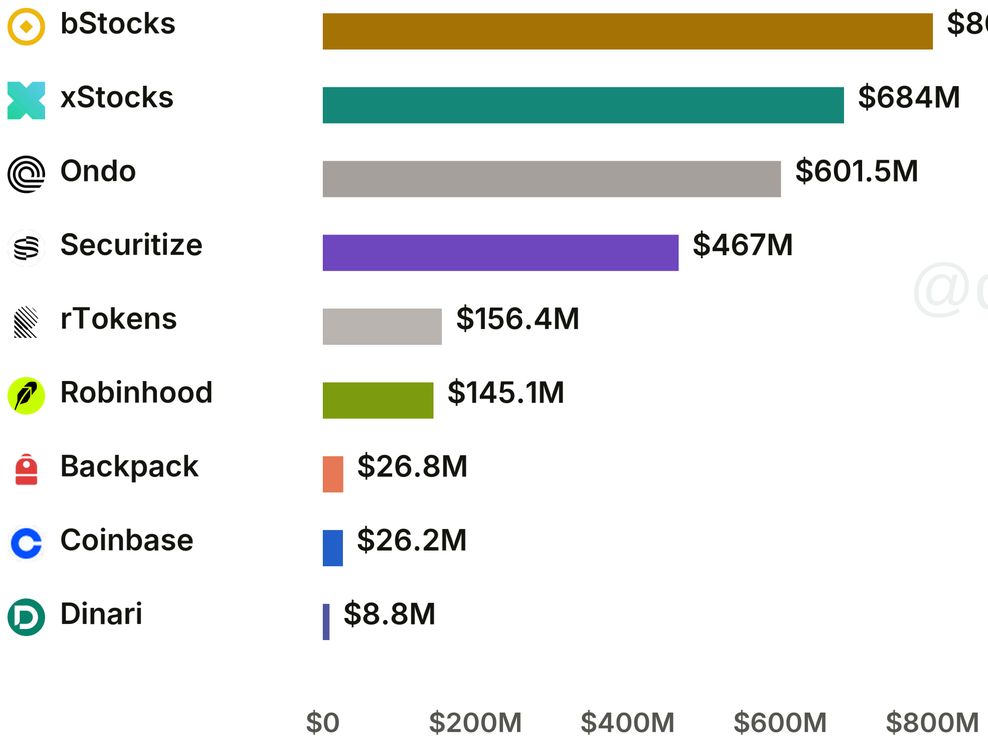


Source: Token Terminal; DefiLlama (EXOD); September 30, 2026 close. Value uses reported circulating balances. Stock and equity-ETF instruments count once across chains; technical wrappers count with their base.

bStocks added the most value in 2026; xStocks grew every month

bStocks added **$801M** from June onward, ahead of xStocks' **$684M** over nine months. xStocks grew every month; Ondo's June and July declines interrupted its earlier gains before growth resumed in August.

Value added in 2026 or since first tracked balance



Monthly change in tokenized stock value

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep
bStocks	—	—	—	—	—	—	+272%	+3%	+22%
xStocks	+10%	+10%	+15%	+32%	+42%	+0.4%	+24%	+29%	+13%
Ondo	+49%	+10%	+13%	+17%	+62%	-16%	-10%	+6%	+7%
Securitize	—	—	—	—	-12%	-14%	+1,721%	+13%	+78%
rTokens	—	—	—	—	—	+$67M*	+113%	+35%	-19%
Robinhood	—	—	—	—	—	—	+418%	+146%	+128%
Backpack	—	—	—	—	—	+$20M*	+13%	+3%	+14%

Dinari	+2%	+6%	+55%	+14%	+25%	+40%	-21%	+11%	+33%

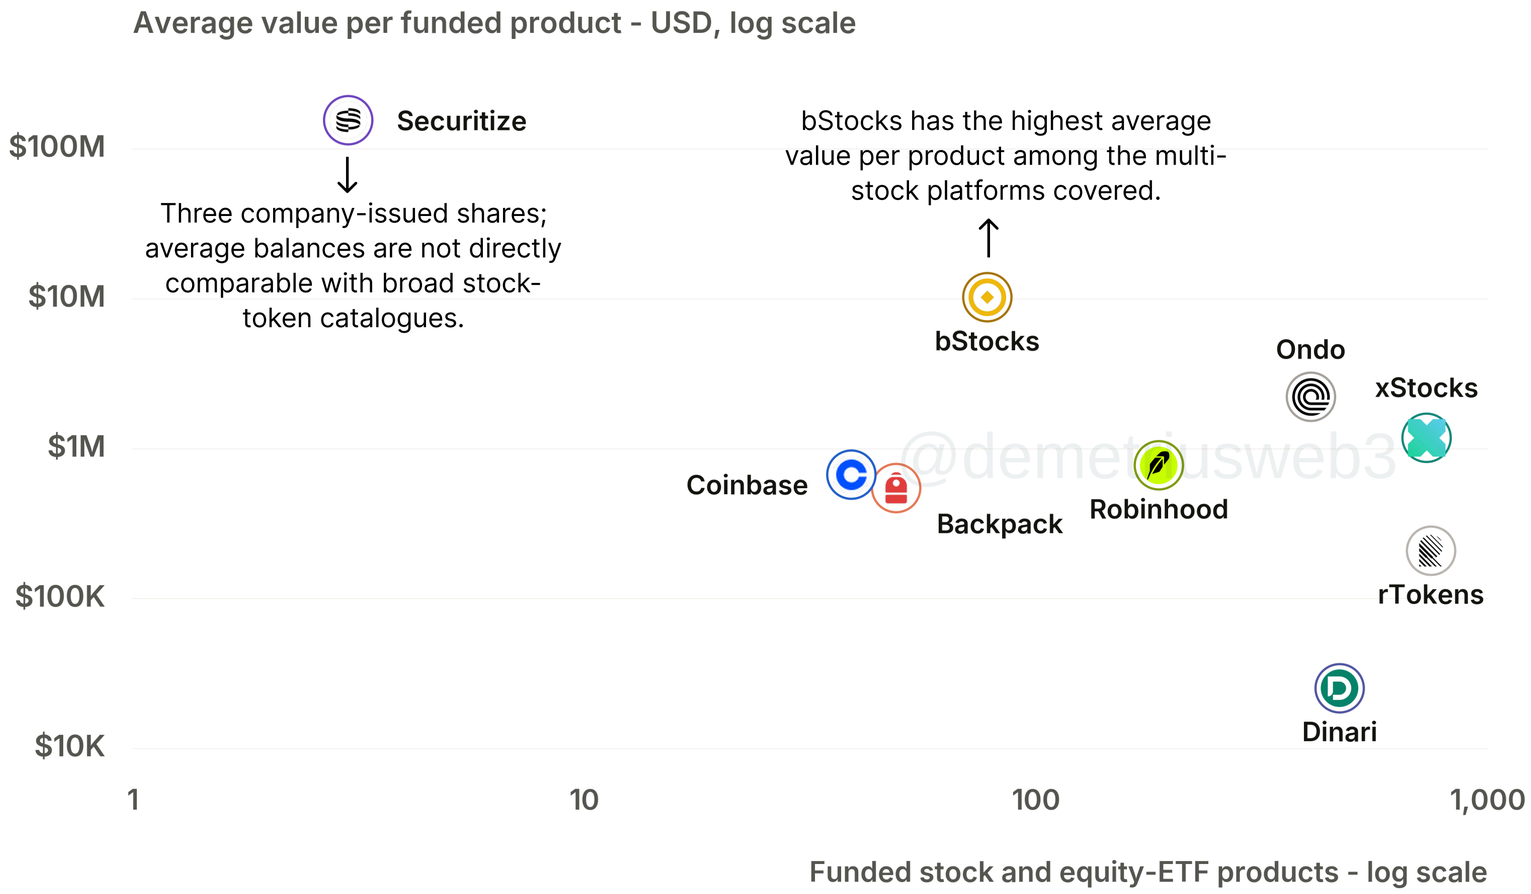
@demetriusweb3

*June shows dollars added for rTokens and Backpack: their earlier recorded balances were too small for a useful percentage comparison.

Source: Token Terminal; DefiLlama (EXOD); September 30, 2026 close. Value added compares September with December 31, or zero before the first tracked balance. Monthly changes include issuance, prices and coverage; they are not net inflows.

A wider stock menu does not guarantee larger balances

bStocks averages **$10.3M** across 78 funded products, versus **$1.2M** across 732 xStocks products. Securitize follows a different model: three company-issued shares.



Platform	Products	Avg. value
Securitize	3	$155.7M
bStocks	78	$10.3M
Ondo	406	$2.2M
xStocks	732	$1.2M
Robinhood	187	$776K
Coinbase	39	$672.2K
Backpack	49	$547K
rTokens	749	$208.8K
Dinari	470	$25.2K

Source: Token Terminal; DefiLlama (EXOD); September 30, 2026 close. Products = positive-value issuer-specific stock or equity-ETF instruments, counted once across chains. Technical wrappers count with their base. Average = platform token value / product count.

Ondo averages 19× more value per token-holder address than Robinhood

Ondo averages **$1,932** per token-holder record, versus **$101** on Robinhood. The same wallet counts again for each token it holds; these figures do not measure the average individual investor.

Token value per token-holder record

	Value / record	Holder records	Covered products
Securitize	$4.9M	80	2/3
rTokens	$81K	1.9K	749/749
Ondo	$1,932	467K	406/406
xStocks	$1,058	819.2K	731/732
Dinari	$693	17.1K	470/470
bStocks	$582	1.4M	78/78
Coinbase	$410	63.9K	39/39
Robinhood	$101	1.4M	187/187
Backpack	$90	296.3K	49/49

Source: Token Terminal; September 30, 2026 close. Value and holder counts use the same products with available holder data. An address counts once per token held. Securitize covers SECZ and CURR; EXOD has no holder metric. xStocks excludes one sub-$1 product without holders.

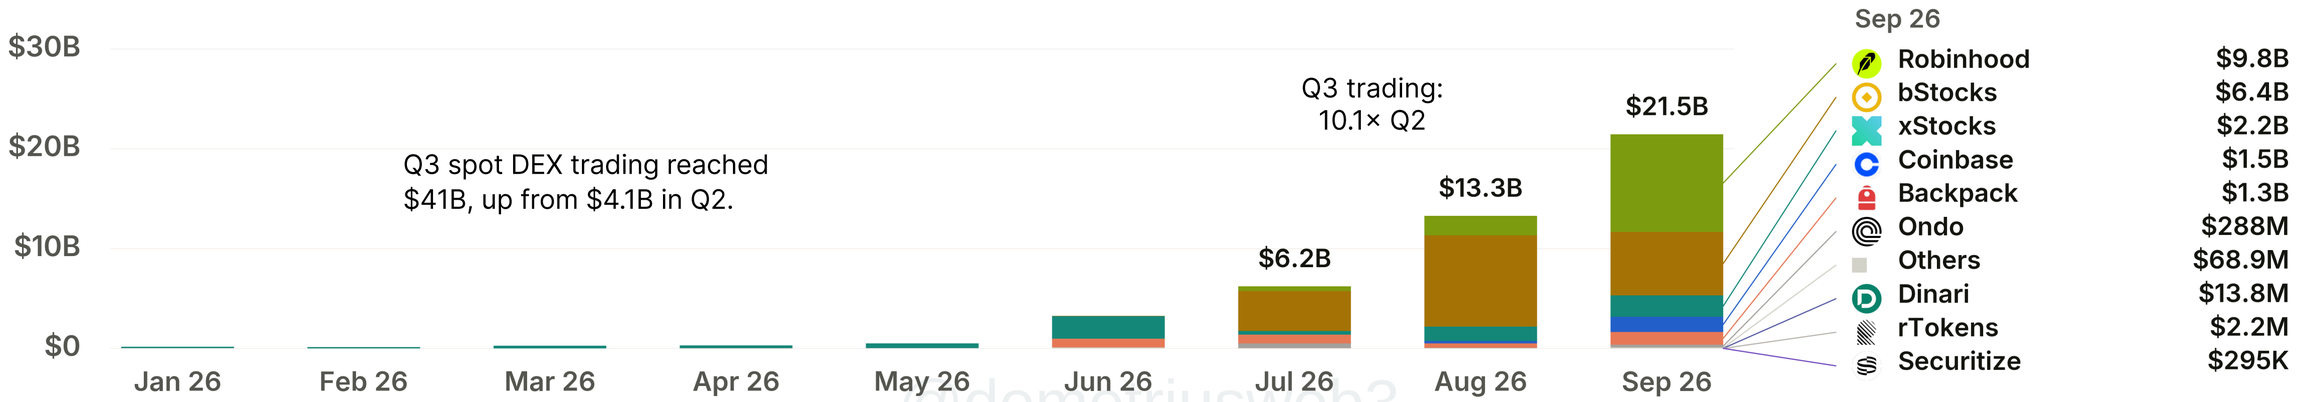
Conclusion

Where do stocks trade, work in DeFi, and cost less?

Robinhood took the spot DEX trading lead in September

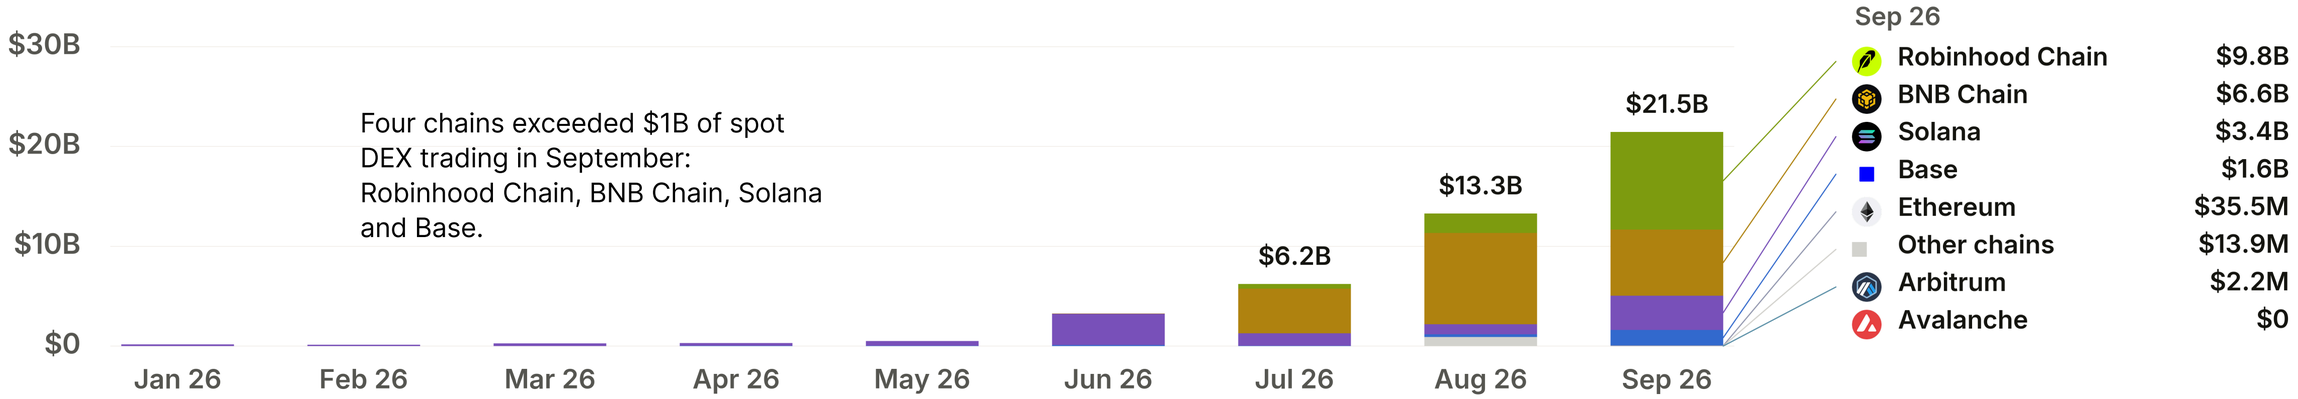
Robinhood generated **$9.78B** in September, **45.6%** of spot DEX trading. bStocks led July and August; QQQB supplied **92%** of its July volume, alongside Binance Wallet incentive campaigns.

Monthly spot DEX trading value - by platform



@demetriusweb3

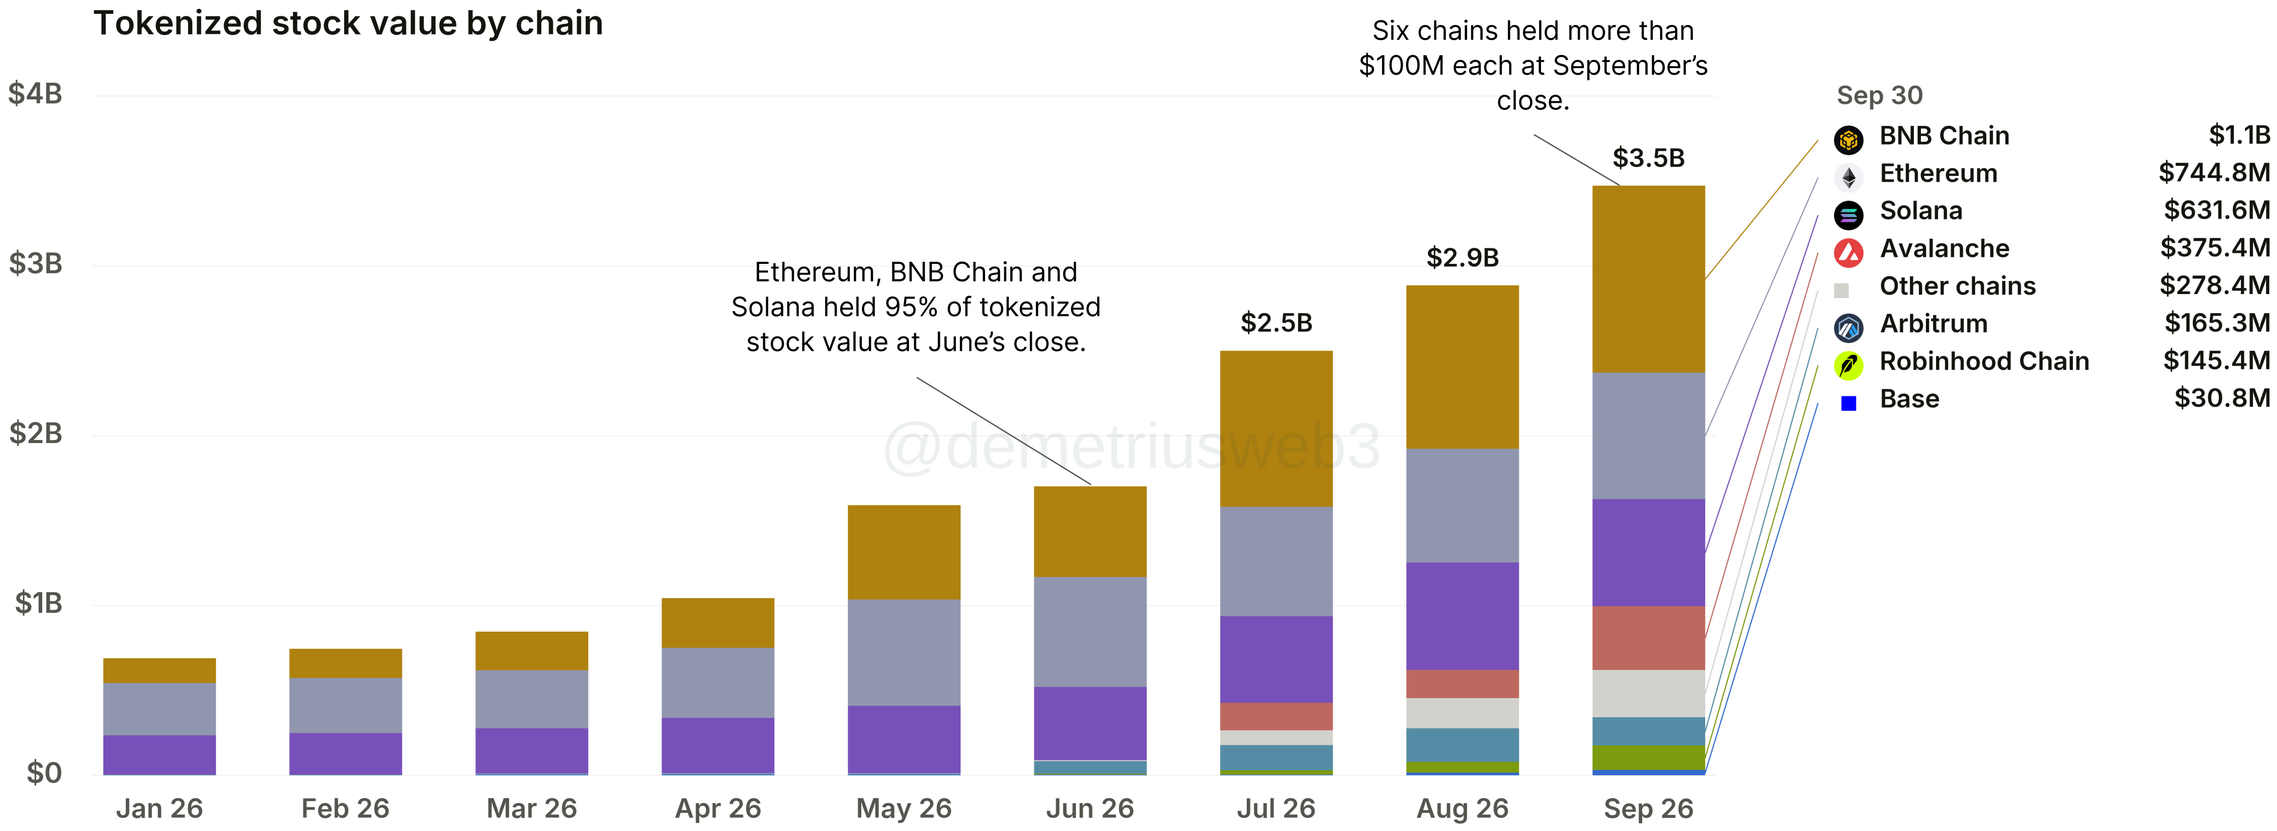
Monthly spot DEX trading value - by chain



Source: Token Terminal; Binance Wallet; September 1–30, 2026. Stock and equity-ETF spot DEX trading only, at indexed venues. Asset-level trading can count both stock-token legs; this is not net cash invested. All months use the same stock scope.

Avalanche gained value while BNB Chain kept its lead

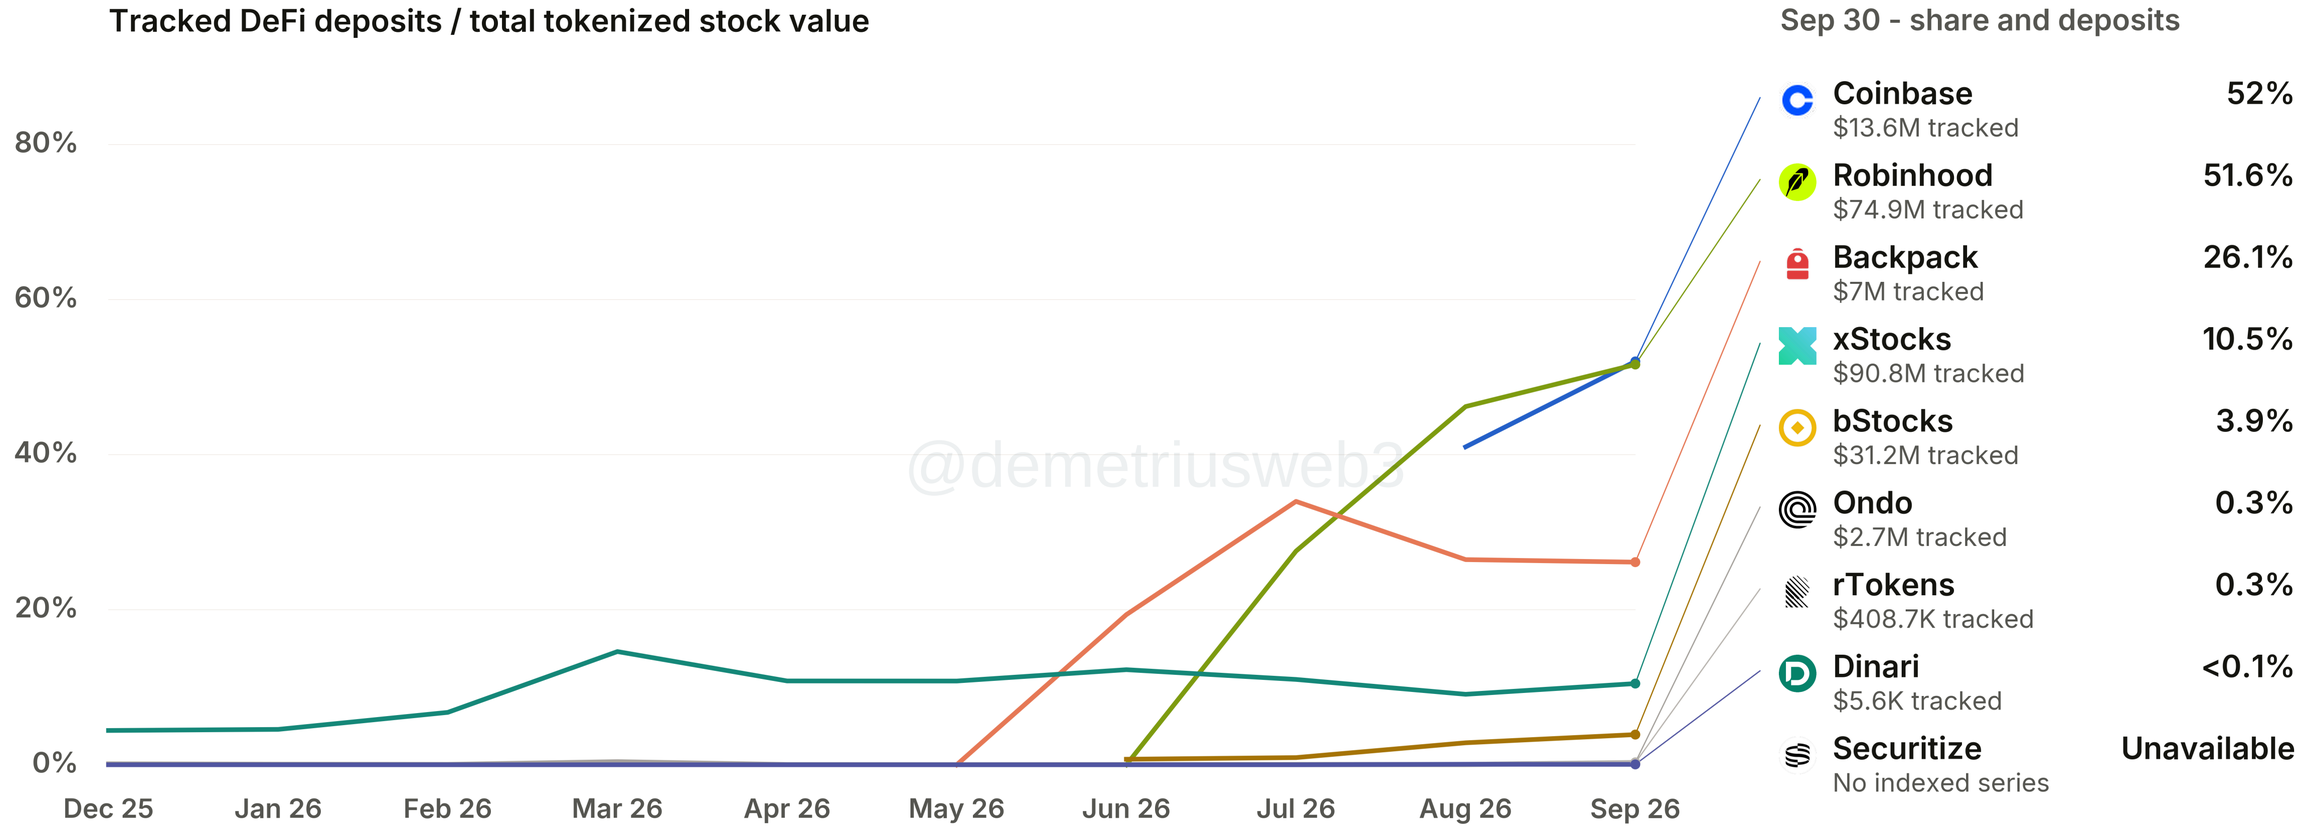
Avalanche added **$209M** during September as Securitize expanded. BNB Chain held the most tokenized stock value at **$1.1B**, ahead of Ethereum's **$745M** and Solana's **$632M**.



Source: Token Terminal; DefiLlama (EXOD); September 30, 2026 close. Value uses reported circulating balances. Stock and equity-ETF instruments count once across chains; technical wrappers count with their base.

About half of Coinbase and Robinhood token value sits in DeFi

Coinbase (52%) and Robinhood (51.6%) have half of their value in DeFi protocols. xStocks has $90.8M in tracked deposits, the highest reported total. Each share divides tracked deposits by that platform's total token value.

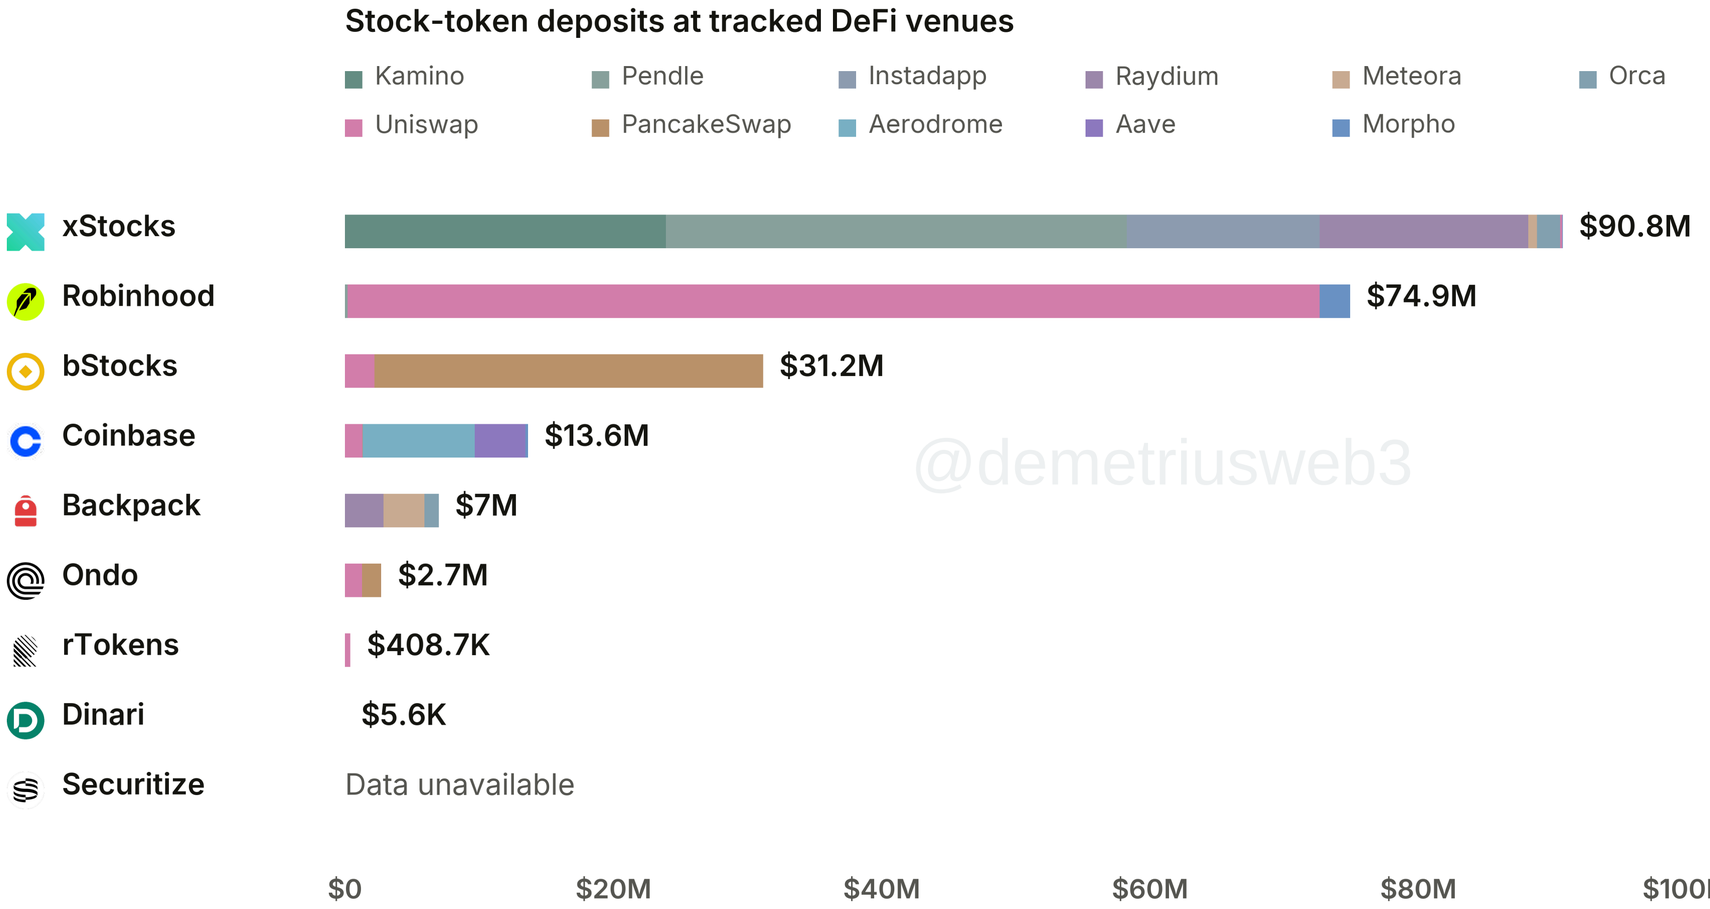


Month-end observations. Lines start with the first available deposit measurement.

Source: Token Terminal; September 30, 2026 close. Month-end share = tracked stock-token deposits / total platform token value. Counterassets and invalid negative records excluded. Coverage is incomplete: rTokens has DeFi records for 9 of 749 products; Securitize has none.

xStocks reaches beyond trading pools into borrowing and yield

Kamino and Pendle hold **$58.3M**, **64%** of xStocks' covered DeFi deposits. Robinhood concentrates **97%** in Uniswap, while Coinbase also holds **$3.8M** at Aave on Base.



Kamino: borrow
Stock-token collateral can support stablecoin loans.

Pendle: yield
Principal and yield trade as separate positions.

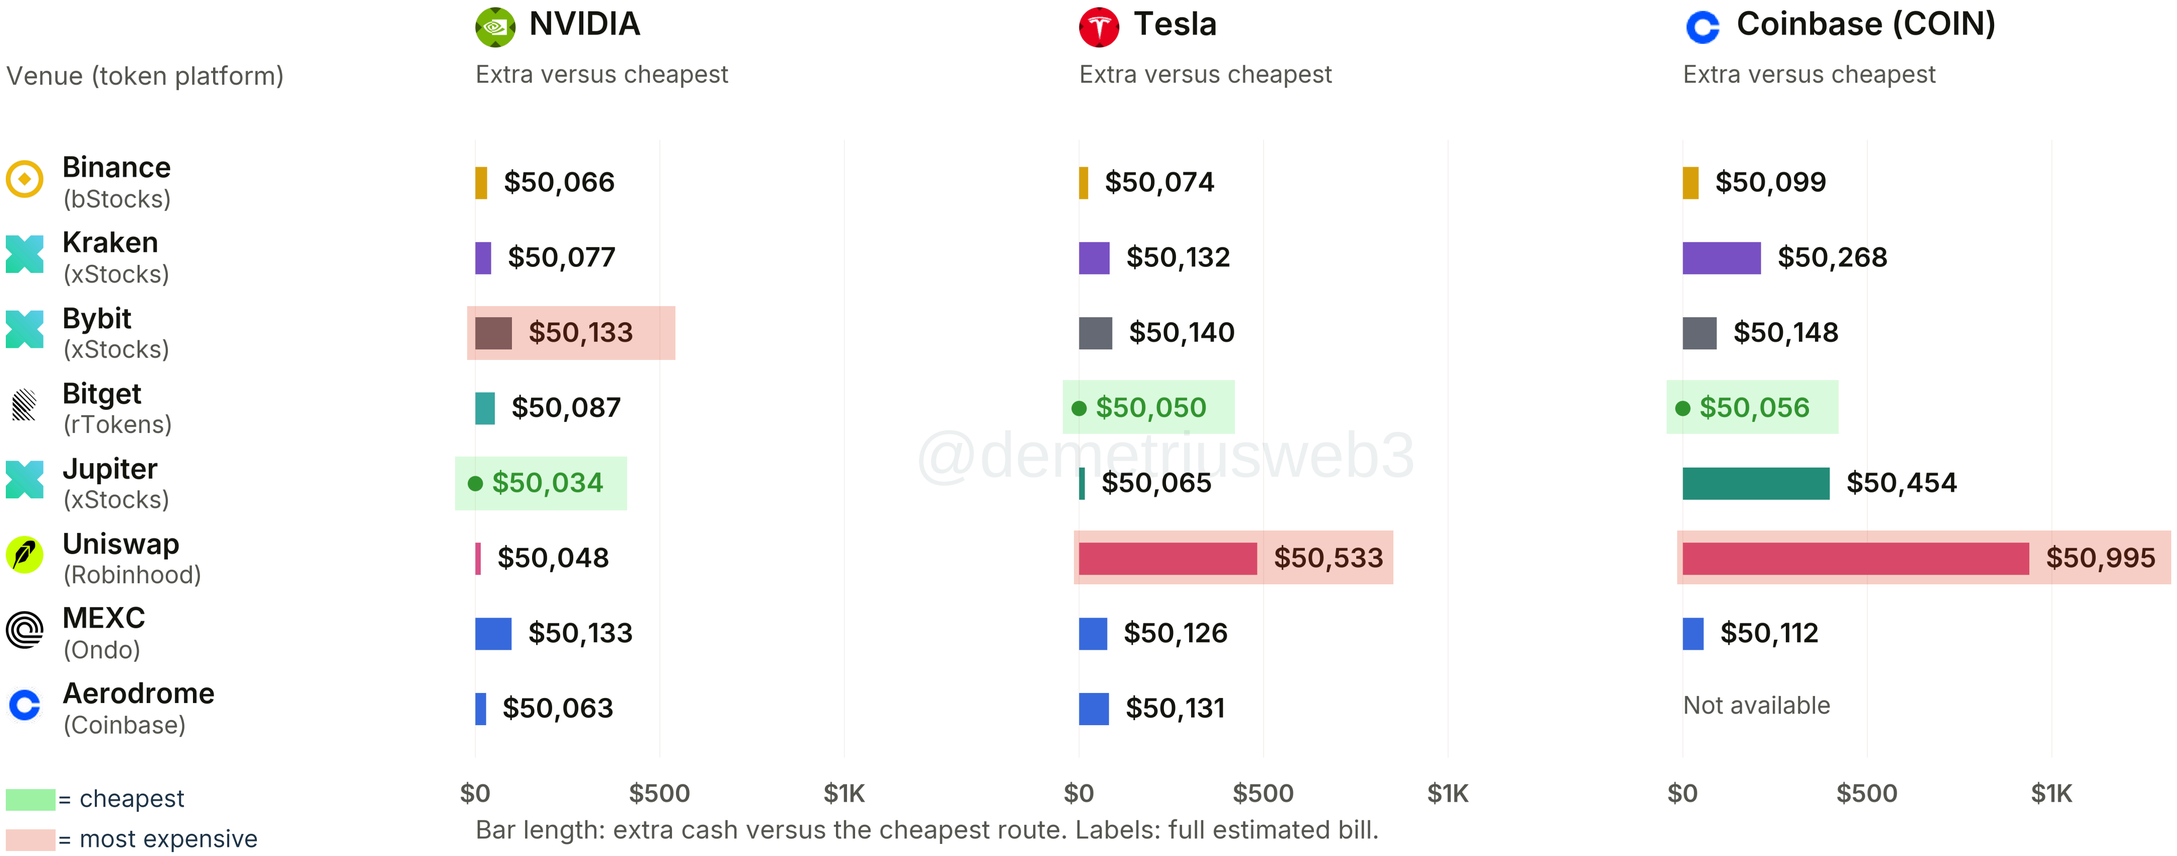
DEX pools hold stock tokens to support swaps. Deposits are not trading volume.

@demetriusweb3

Source: Token Terminal; Kamino; Pendle; September 30, 2026 close. Stock-token balances at covered protocols, matching the DeFi-share chart. Counterassets and invalid negative records excluded. Missing venues are unavailable; deposits do not measure trading volume.

Where you buy matters as much as what you buy

The same **$50K** of COIN exposure cost an estimated **$50,056 on Bitget** and **$50,995 on Uniswap**. Across venues, the gap reached $939 for COIN but only $99 for NVIDIA.



@demetriusweb3

Buying on CEX is not always the cheapest. Also, execution costs compare price exposure, not equivalent legal rights, backing protections, or redemption access.

Source: Binance; Kraken; Bybit; Bitget; MEXC; Jupiter; Uniswap; Aerodrome. September 30, 2026, 11:33–11:38am ET: median of ten $50K buy quotes adjusted to equal stock exposure. Standard taker fees included; network fees excluded. Jupiter uses aggregated routes; Uniswap uses selected pools. Actual bills can differ.

Conclusion

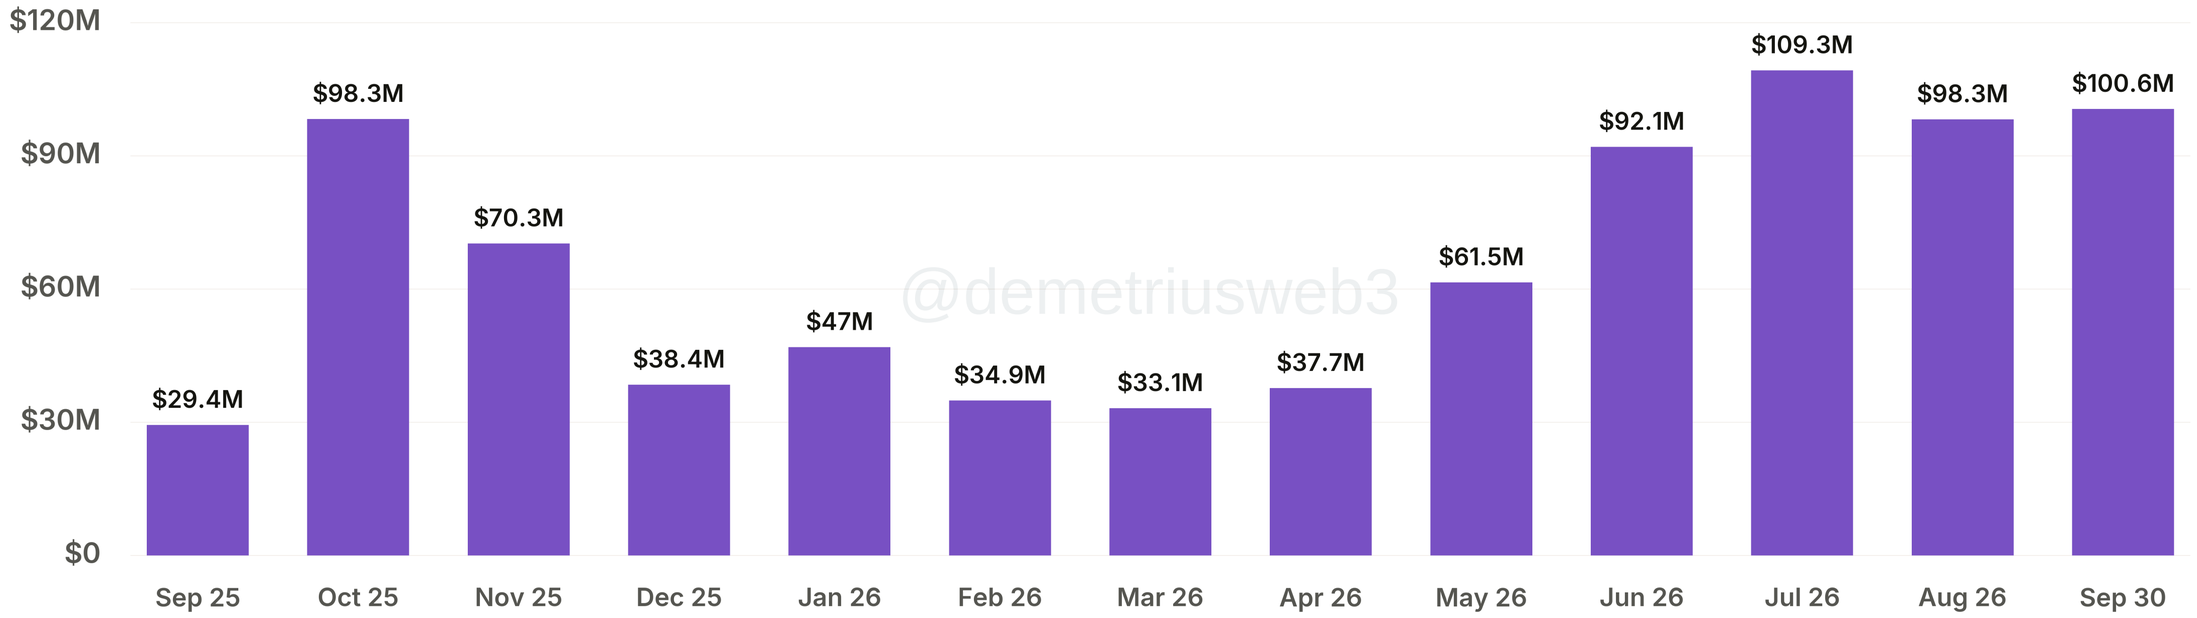
Which stocks trade on Kraken, and when?

Kraken sustained its $100M monthly trading pace through September

Kraken handled $100.6M of xStocks/USD spot trading in September, 2.4% above August. The month kept trading near the $100M pace established over the summer.

xStocks/USD spot trading value

September 2025 - September 30, 2026



June–August: three full months above $90M.

September is a complete month.

Source: Kraken; as of September 30, 2026. All xStocks/USD spot pairs; complete calendar months.

Crypto-linked stocks lead Kraken’s xStocks market

Strategy and Circle generated $211M combined, ahead of Tesla and the broad-market SPY ETF. Together, they supplied 24.8% of Kraken’s xStocks/USD trading.

xStocks/USD spot trading value

September 1, 2025 - September 30, 2026 - USD

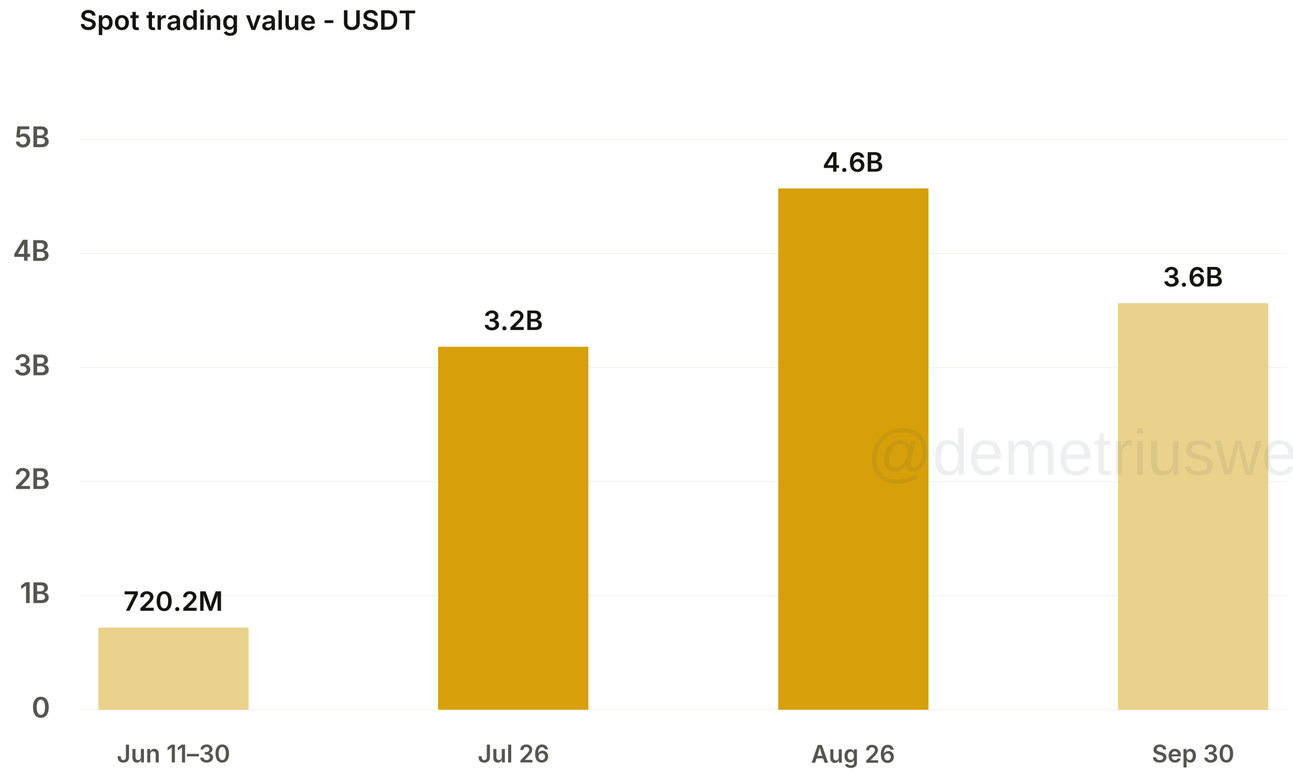
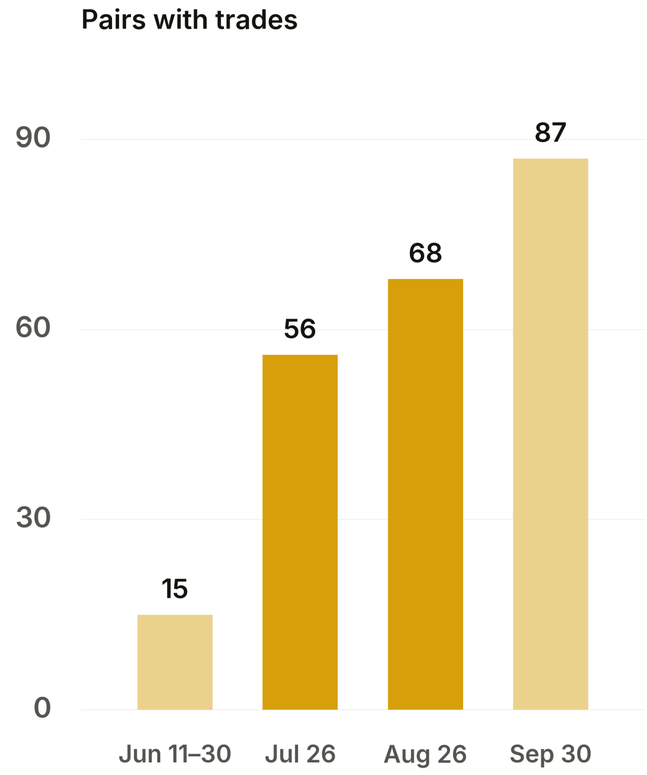
Conclusion

How much stock-token activity does Binance capture?

Binance’s wider stock menu traded less than in August

Actively traded bStocks/USDT pairs rose from 68 to 87. September trading fell 22% to 3.56B USDT; average daily trading declined from 147.4M to 118.8M USDT.





@demetriusweb3

Average daily trading: 147.4M USDT in August - 118.8M USDT in September.

Daily trading fell 19.4% while active pairs increased from 68 to 87.

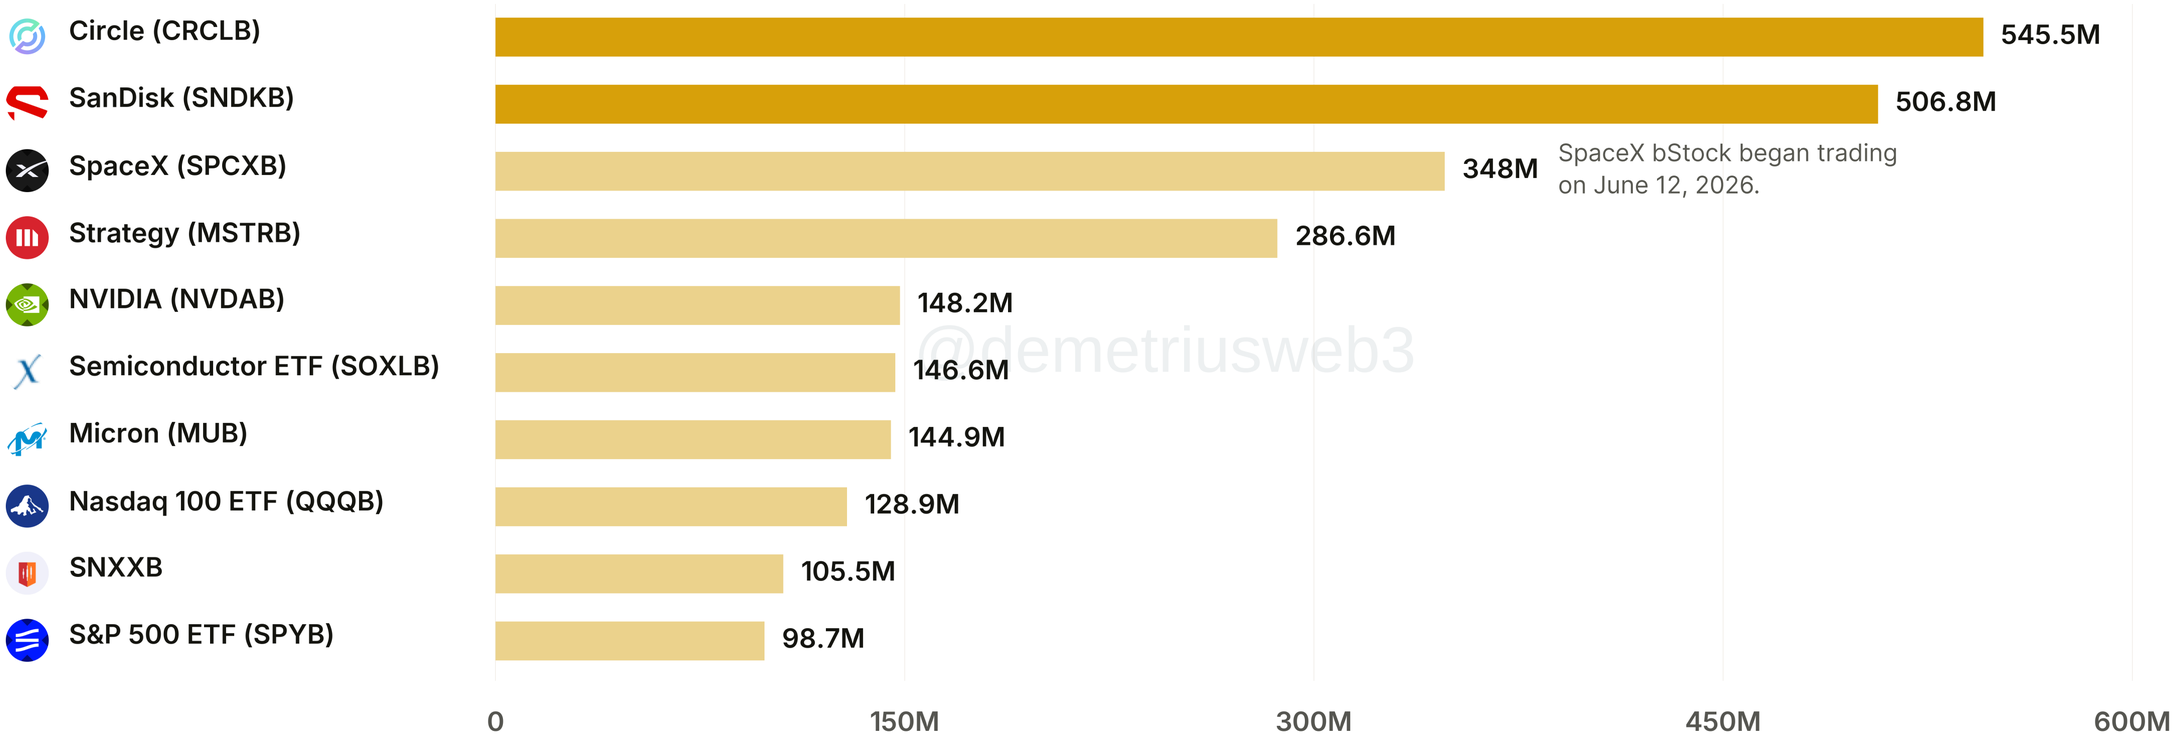
Source: Binance; as of September 30, 2026. All bStocks/USDT spot pairs; September is a complete month.

Two stocks supplied nearly a third of Binance bStocks trading

Circle and SanDisk generated 1.05B USDT in September. Those two stocks accounted for 29.5% of trading across 87 active bStocks/USDT pairs.

bStocks/USDT spot trading value

September 1–30, 2026 - USDT



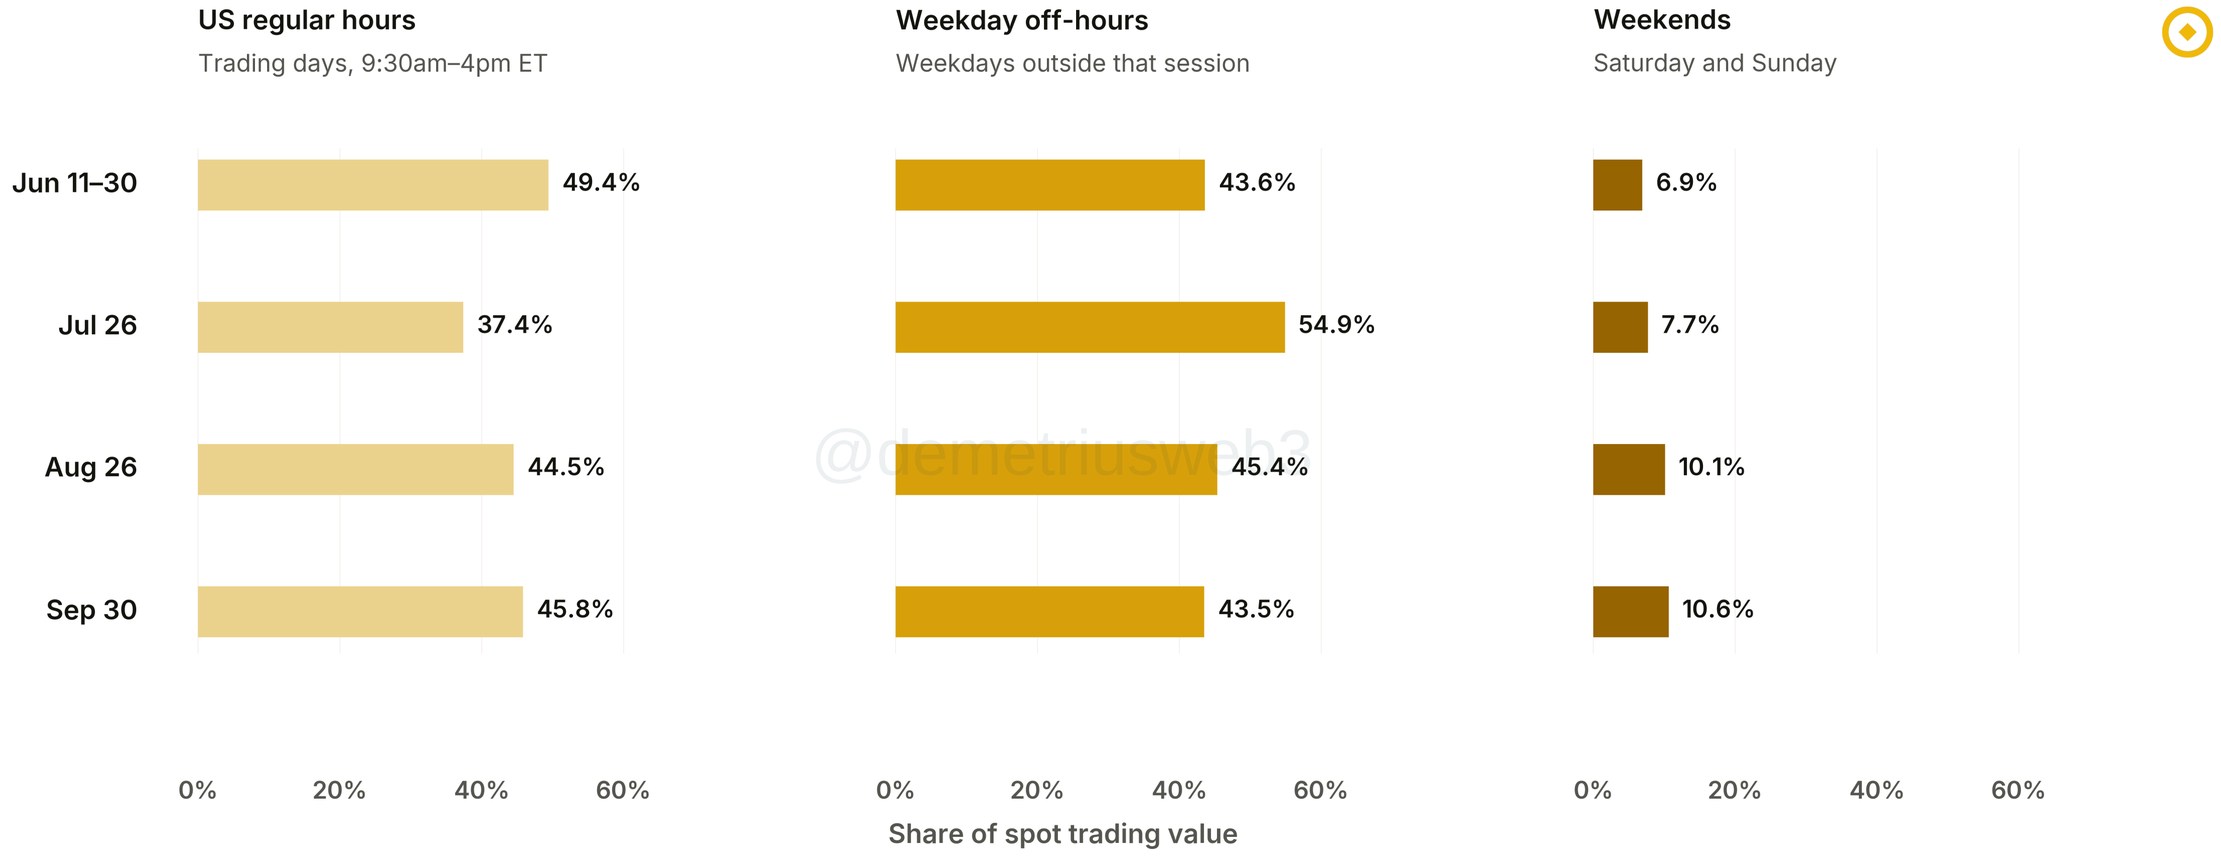
@demetriusweb3

Circle + SanDisk: 29.5% of all bStocks/USDT trading.

Source: Binance; as of September 30, 2026. All bStocks/USDT spot pairs, September 1–30.

Weekday off-hours drive Binance’s round-the-clock trading

Weekday off-hours supplied 43.5% of Binance’s September spot trading value; weekends supplied 10.6%. Together, they accounted for 54.2% outside US regular trading hours.



54.2% traded outside US regular hours in September.

Shares measure trading value, not trading per hour.

Source: Binance; NYSE; as of September 30, 2026. All bStocks/USDT spot pairs. Sessions use New York time and the US trading calendar.

Robinhood

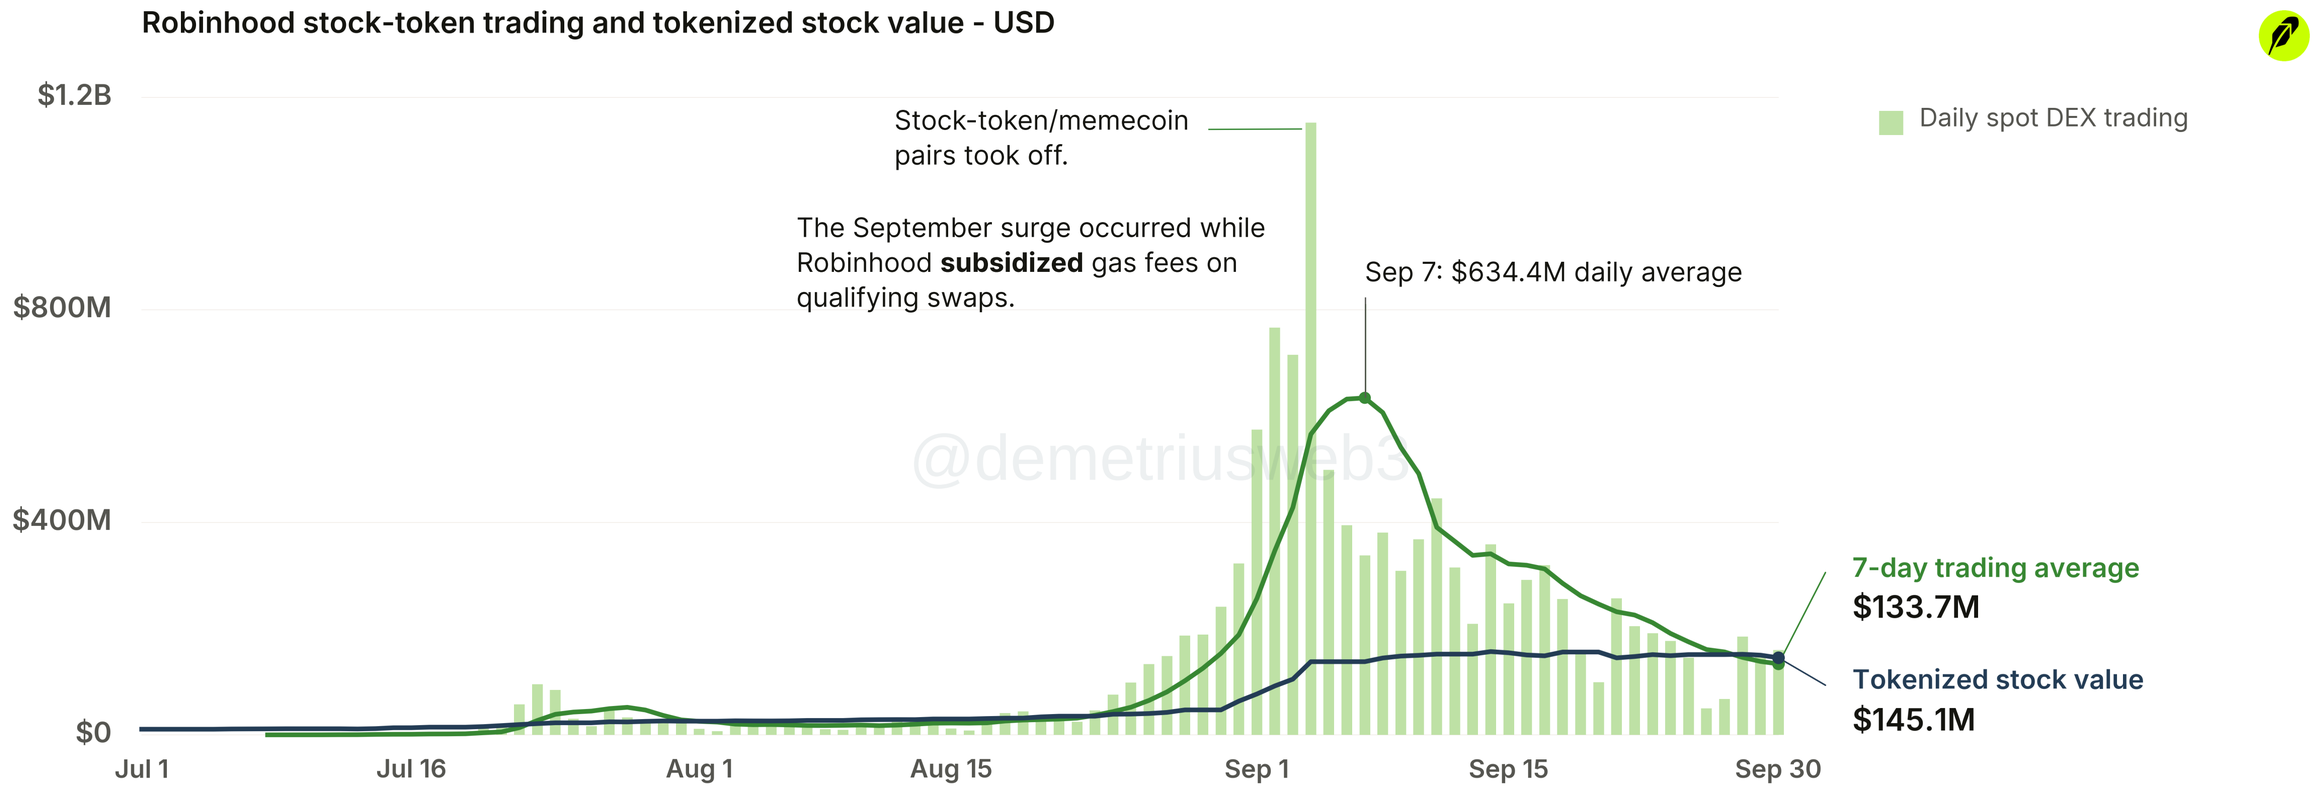
Coinbase

Conclusion

How are Robinhood stock tokens traded and used?

Robinhood’s September surge cooled as the month progressed

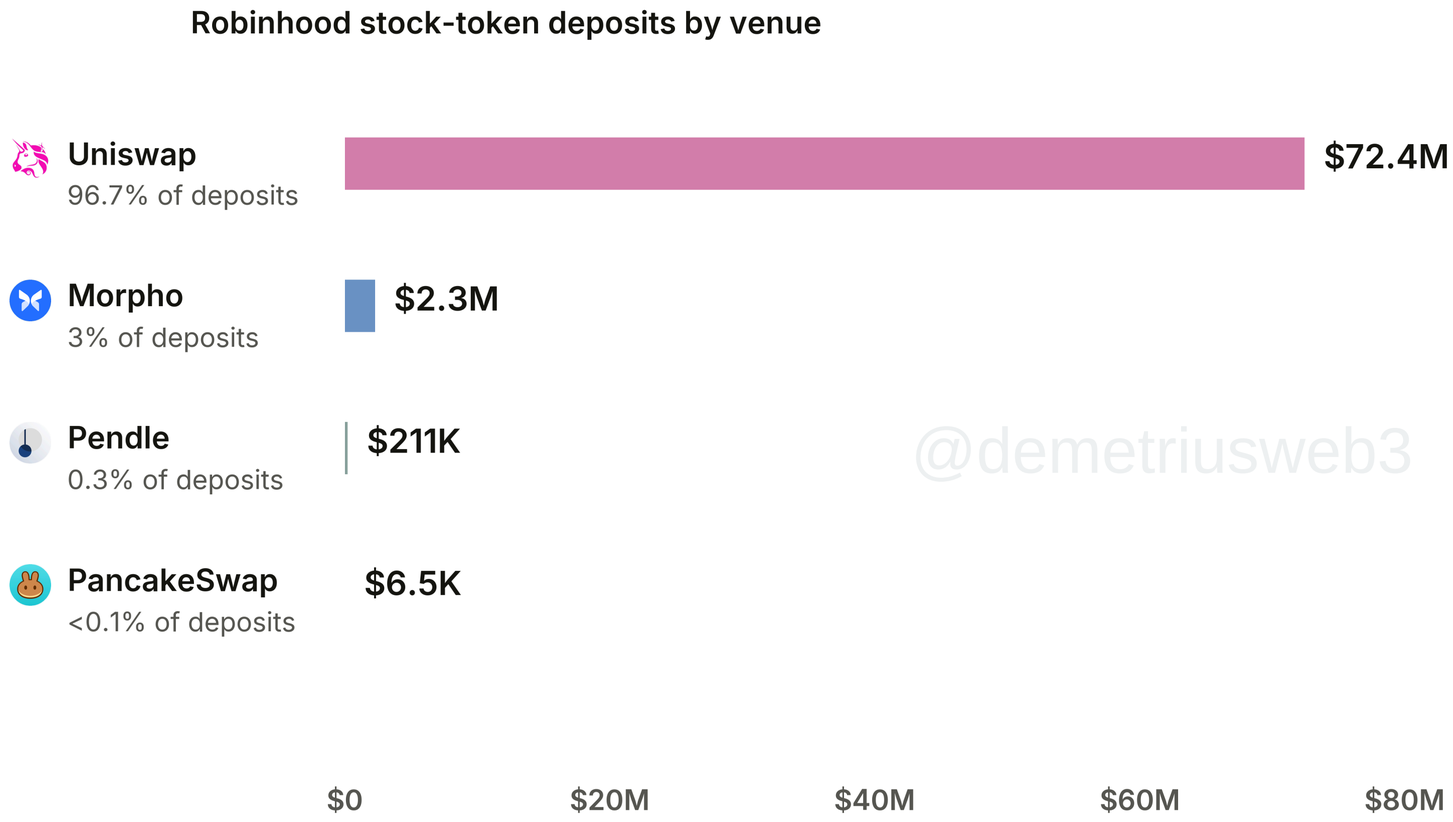
Seven-day average daily spot DEX trading fell 79% from September 7 to September 30. At $134M, it ended below $145M in tokenized stock value.



Source: Token Terminal; Robinhood; crypto.news (gas-subsidy reporting). July 1–September 30, 2026. Fixed set of 187 stock and equity-ETF instruments funded at September close. Known daily spot DEX trades; missing observations remain gaps. Tokens can trade repeatedly; volume is not new investment.

Robinhood’s DeFi balances mainly support trading

Uniswap holds **$72.4M**, or **97%** of Robinhood stock-token balances at covered DeFi venues. Morpho holds $2.3M; those balances do not measure borrowing against stocks.



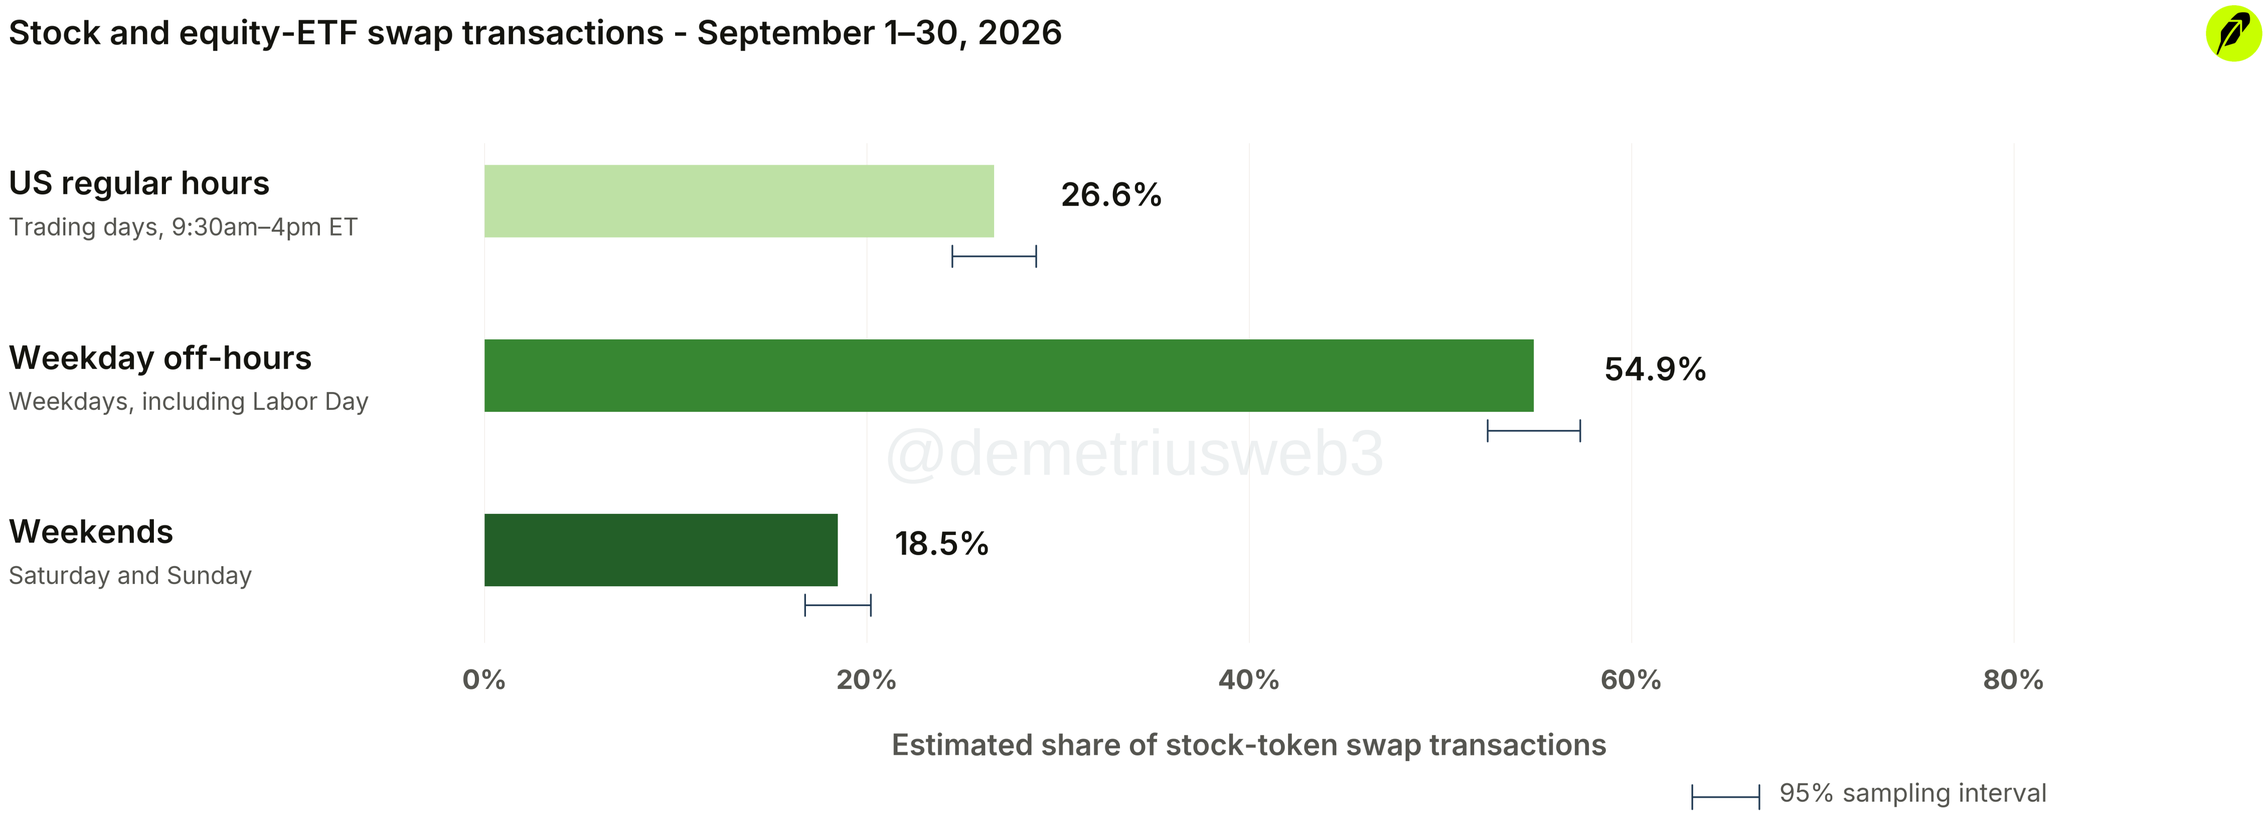
DEX liquidity pools hold stock tokens alongside the assets they can be swapped for.

@demetriusweb3

Source: Token Terminal; September 30, 2026 close. Robinhood balances sum to $74.9M, matching the DeFi-share chart. Counterassets excluded. Morpho balances do not establish how much investors borrowed against stocks.

Most Robinhood Chain stock token swaps happen outside regular US trading hours

An estimated 73.4% of September stock-token swap transactions occurred outside US regular hours: 54.9% during weekday off-hours and 18.5% on weekends. Each transaction counts once, even when it includes several swaps.



US regular hours had 1.4× as many swaps per hour as weekday off-hours.

Source: Robinhood Chain RPC; official token registry; NYSE. September 1–30, 2026 ET. Note: Estimates from 762 random block samples across 187 funded stock and equity-ETF instruments. Outside-hours 95% interval: 71.2%–75.5%. Routed swaps count once per transaction. App trades are excluded.

Coinbase

Conclusion

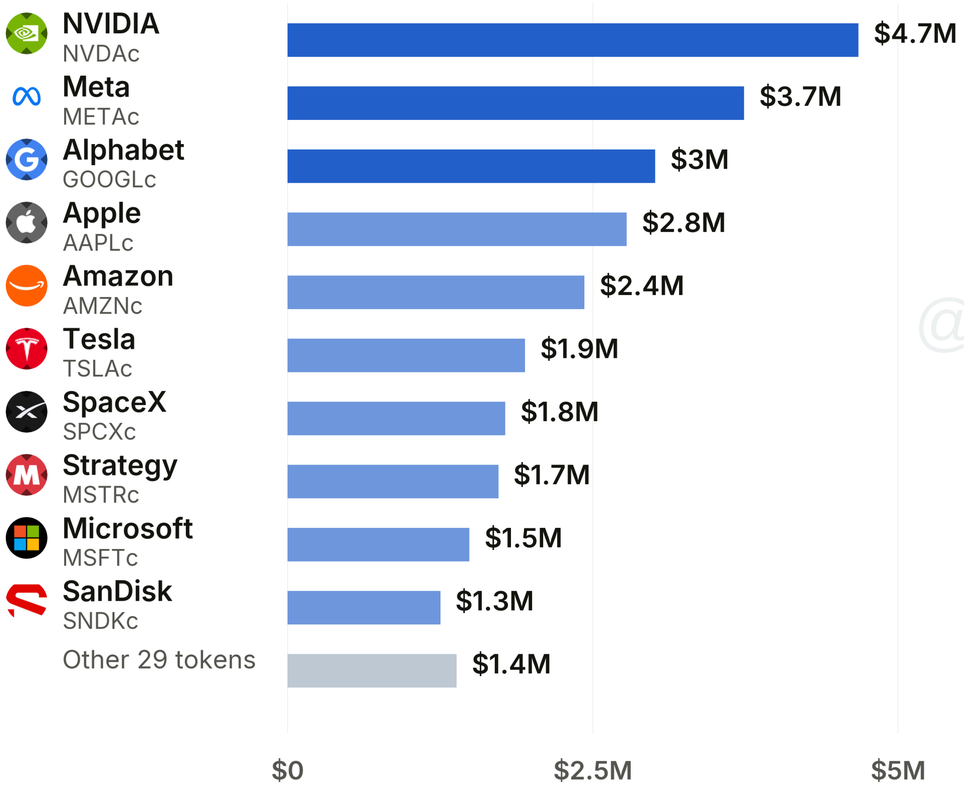
How do Coinbase’s stock tokens trade and enter DeFi?

Three stocks generate half of Coinbase's stock-token DEX trading

NVIDIA, Meta and Alphabet supplied **49.5%** of September's **$1.52B** in spot DEX trading. NVIDIA led both rankings: **$4.7M** in token value and **$290M** traded.

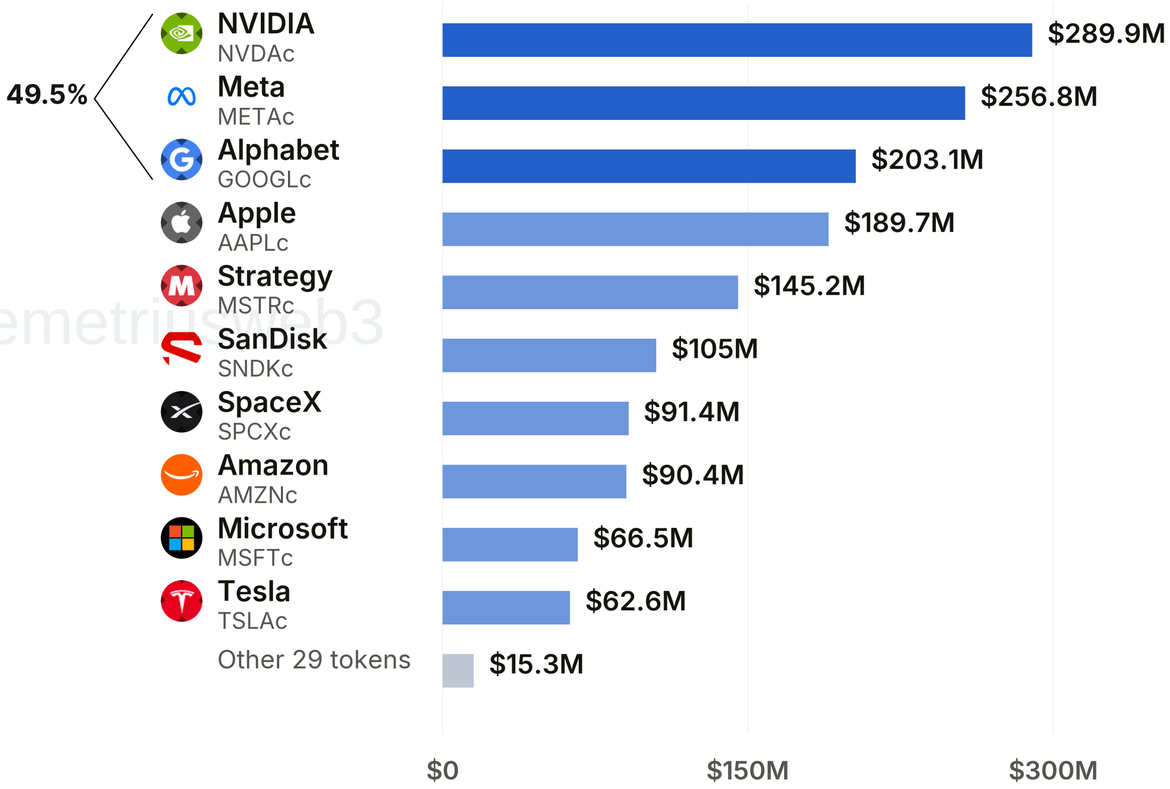
Tokenized stock value - Sep 30

All 39 funded stock tokens - $26.2M



Spot DEX trading value - September

All 39 funded stock tokens - $1.52B

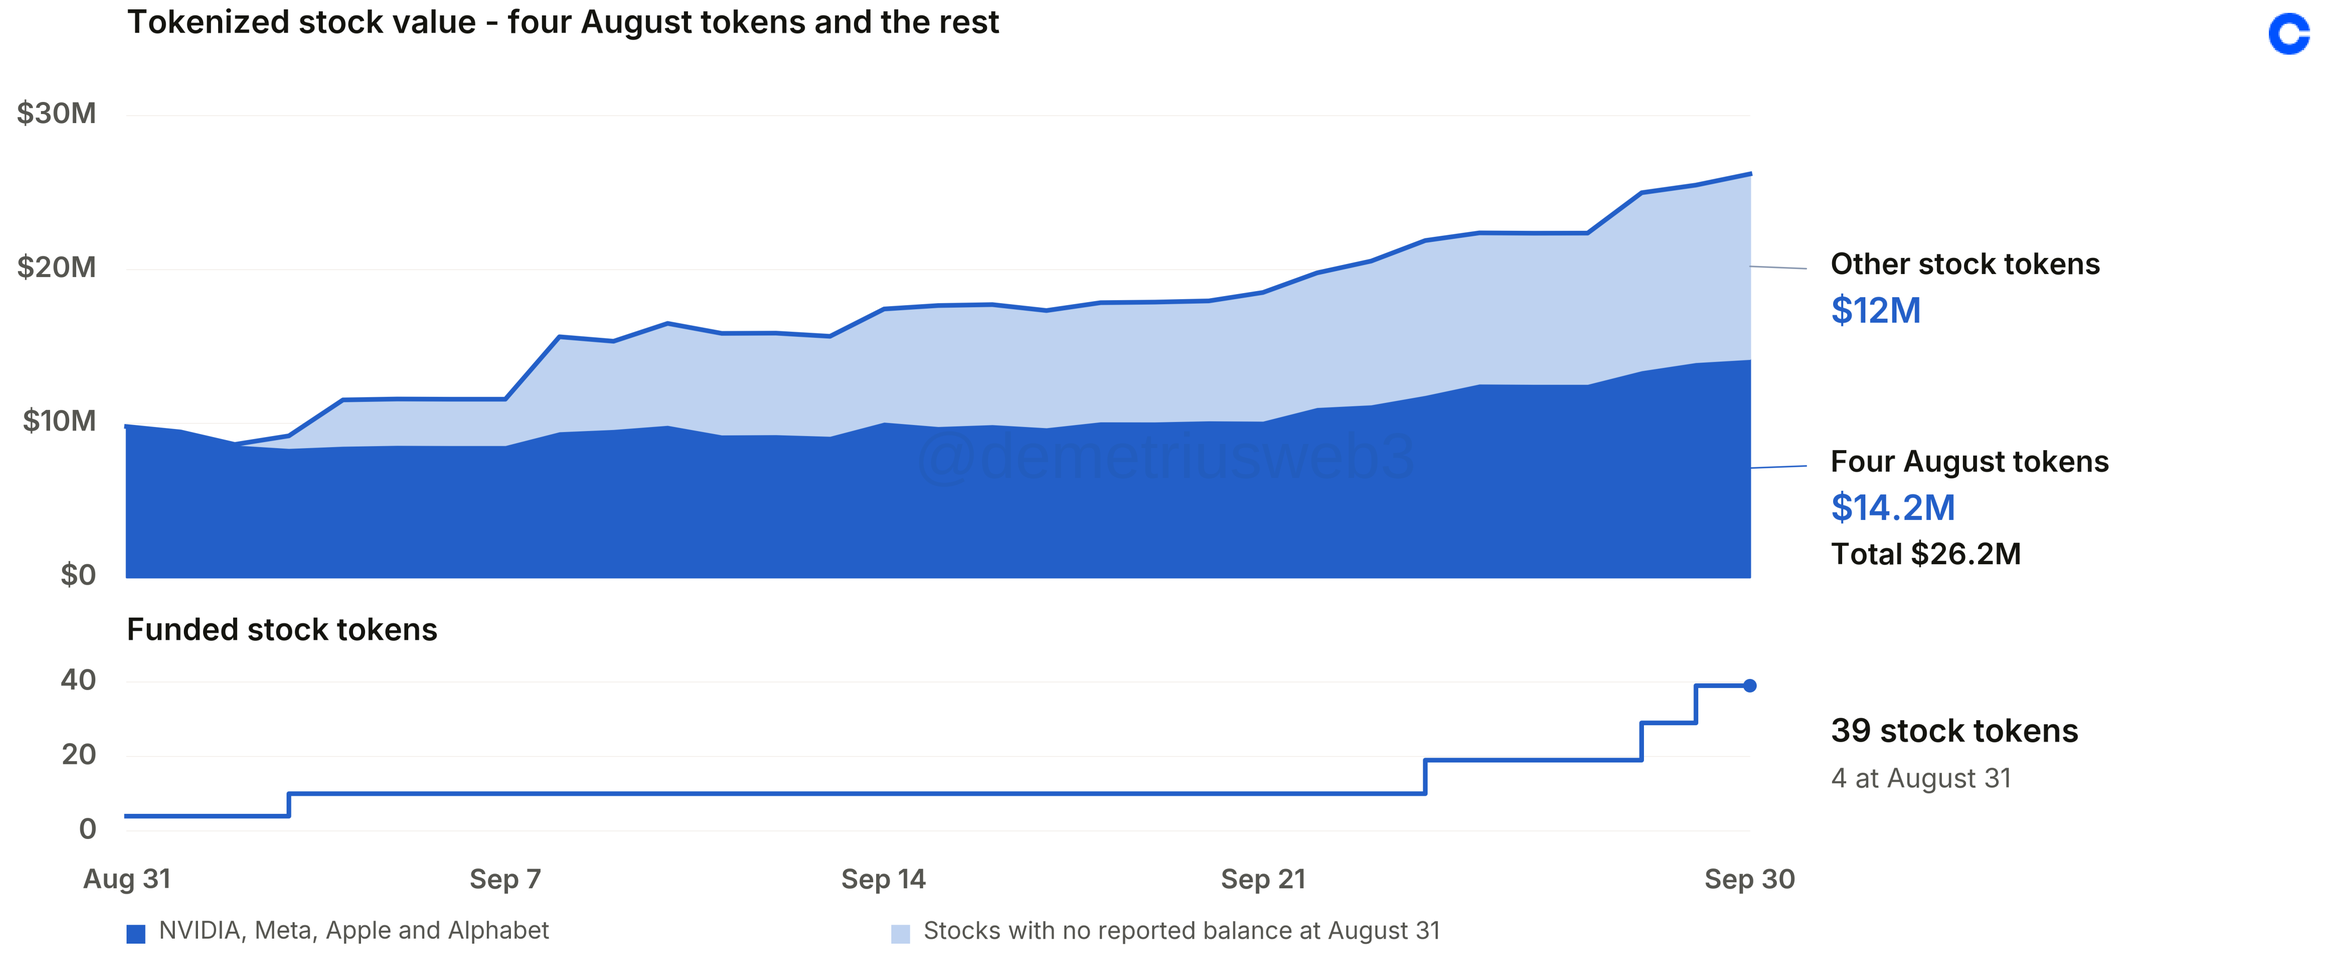


@demetriusweb3

Source: Token Terminal; as of September 30, 2026. All 39 Coinbase stock tokens with positive circulating value; top ten shown, remaining 29 grouped. Spot DEX trading covers September 1–30 UTC. Stock-to-stock trades count toward both tokens. Value uses reported circulating balances.

Stocks beyond the August lineup supplied 73% of Coinbase's September growth

Tokenized stock value grew **167.5%** to **$26.2M**. Stocks outside the four August tokens added **$12M** of the month's **$16.4M** gain; the **original four** still held **54%** of value at month-end.

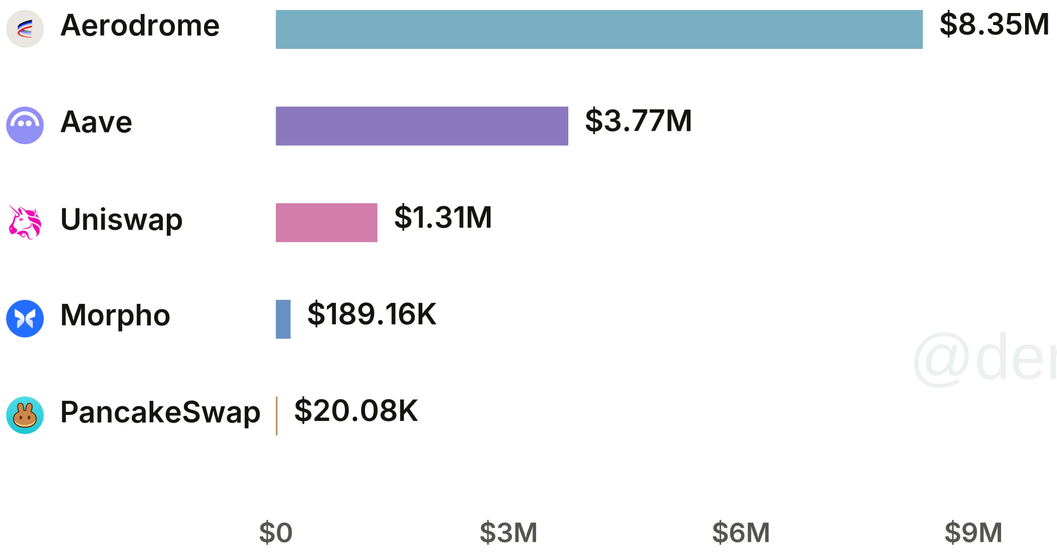


Source: Token Terminal; August 31–September 30, 2026. The August group comprises NVDAc, METAc, AAPLc and GOOGLc. Counts use positive circulating balances. Changes include issuance, prices and tracking coverage; they do not measure investor inflows.

Aave gives Coinbase’s stock tokens a use beyond trading

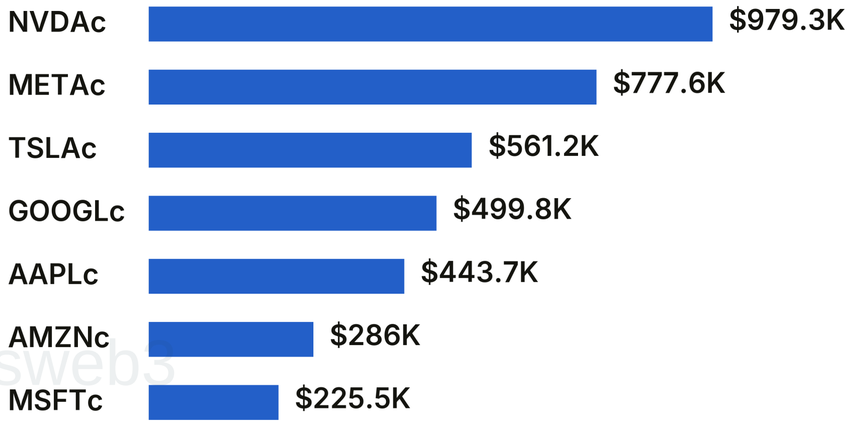
Aave held **$3.77M** of stock collateral supporting **$1.13M** in outstanding USDC loans at September’s close. Aerodrome held **$8.35M**, or **61%** of Coinbase’s stock-token deposits at covered DeFi venues.

Where Coinbase stock tokens sit in DeFi



Sep 25: Aave opens stock-token collateral for USDC loans.

Aave stock collateral and pooled USDC borrowing



Outstanding pooled USDC loans

Supplied stock collateral

Borrowed USDC

How it works: holders can combine several stocks as collateral and borrow USDC against them, within Aave’s borrowing limits.

Conclusion

Who leads today, and what will decide the next phase?

The market is growing fast, but exposure is becoming a commodity.

As more platforms offer exposure to the same stocks, that exposure becomes increasingly commoditized. The differences still matter: what the investor owns, who holds the backing, who can redeem, and how much it costs to buy or exit. Securitize's issuer-sponsored shares make that distinction clear: the token represents the company's share, while the multi-stock wrappers provide a separate claim linked to it.

The platforms with the most token value do not capture every form of activity. Ondo and xStocks lead by value; Robinhood Chain led September DEX trading; Token Terminal records the most stock-token dollars in DeFi for xStocks among the platforms compared. Competition now extends to making those holdings useful: accessible liquidity, dependable redemption and DeFi markets that let investors use their stock exposure.

Current leaders by segment

Market value

Ondo and xStocks lead by tokenized stock value. Their **$902M** and **$867M** put both ahead of bStocks and Securitize.

Value per stock token

Securitize leads average value per product across three company-issued shares. SECZ supplies most of that value.

Trading activity

Robinhood led September spot DEX trading. Binance bStocks generated more spot trading value than Kraken xStocks over the full month.

Chain leadership

Robinhood Chain led September spot DEX trading. BNB Chain held the most tokenized stock value at September 30.

DeFi use

Half of Coinbase and Robinhood's token value sits in DeFi protocols. xStocks holds the most deposited dollars at **$90.8M**.

Source: Token Terminal; DefiLlama (EXOD); Binance; Securitize; Coinbase. September 30, 2026 close. DeFi covers indexed protocols; September trading covers the complete month. Token value includes stock and equity-ETF instruments.
