Steakhouse Financial

Q2 2026

Public Vault Business Performance Review

Steakhouse's Q2 growth was strong and concentrated in Base and Morpho V2.

Stronger USDC demand on Base, the V1-to-V2 migration and the June Coinbase-Ethena launches defined the quarter.

- 1 Gross vault TVL increased by **\$318.1M (+17.5%)** to **\$2.135B**.
- 2 Deposits in Steakhouse-curated Morpho vaults rose **\$93.8M (+5.9%)** to **\$1.693B**.
- 3 Base added **\$489.2M** and reached **58.2%** of gross vault TVL, while all other chains declined by **\$171.2M**.
- 4 Morpho V2 passed V1 on June 25 and closed Q2 with **52.6%** of Morpho deposits after equivalent V1 vaults closed to new deposits.
- 5 Morpho vaults generated **\$14.649M** of gross yield and **\$817,715** of onchain curator fees; Steakhouse ranked **first** in the selected peer set for absolute TVL growth and gross yield.

What is Steakhouse?

Steakhouse Financial is a DeFi vault curator that designs, curates and distributes non-custodial yield strategies across third-party lending protocols. Steakhouse announced its first USDC MetaMorpho vault in November 2023.

How Steakhouse monetizes

Certain vaults charge product-specific performance fees on generated yield. Steakhouse also builds partner products and provides advisory and capital-formation services.

This report measures Steakhouse's public vault activity and observable onchain fees. It excludes advisory, product-building and capital-formation revenue, as well as company expenses and retained cash.

Steakhouse's onchain footprint

Steakhouse supports operations across numerous chains such as Base, Ethereum, Robinhood Chain, Solana, Monad, Arbitrum and more.

Morpho and Kamino are Steakhouse's main DeFi venues. 50+ vault deployments across flagship, partner-branded and bespoke strategies.

Steakhouse closed Q2 with \$2.135B in gross vault TVL.

Gross vault TVL grew **17.5%**; Morpho gross yield rose **2.3%** to \$14.649M, while onchain curator fees increased **1.6%** to \$817,715.

Vault business metrics		2025				2026	
Metric		Q1	Q2	Q3	Q4	Q1	Q2
Gross vault TVL (\$B)		\$0.561B	\$0.781B	\$1.613B	\$1.690B	\$1.817B	\$2.135B
<i>QoQ change</i>		<i>N.A.</i>	<i>+39.2%</i>	<i>+106.5%</i>	<i>+4.8%</i>	<i>+7.5%</i>	<i>+17.5%</i>
Morpho share of gross vault TVL		98.1%	95.5%	74.3%	85.6%	94.4%	98.3%
<i>QoQ change</i>		<i>N.A.</i>	<i>-2.6pp</i>	<i>-21.2pp</i>	<i>+11.4pp</i>	<i>+8.8pp</i>	<i>+3.9pp</i>
Morpho gross yield generated (\$M)		\$5.914M	\$5.334M	\$11.288M	\$15.622M	\$14.324M	\$14.649M
<i>QoQ change</i>		<i>N.A.</i>	<i>-9.8%</i>	<i>+111.6%</i>	<i>+38.4%</i>	<i>-8.3%</i>	<i>+2.3%</i>
Morpho onchain curator fees (\$M)		\$0.132M	\$0.100M	\$0.173M	\$1.135M	\$0.805M	\$0.818M
<i>QoQ change</i>		<i>N.A.</i>	<i>-23.9%</i>	<i>+72.8%</i>	<i>+556.4%</i>	<i>-29.1%</i>	<i>+1.6%</i>
Morpho curator fee share		2.2%	1.9%	1.5%	7.3%	5.6%	5.6%

- Gross vault TVL **grew** nearly **4x** over the six-quarter window.
- Morpho's share recovered and reached a new high at **98.3%** after falling to **74.3%** in Q3 2025.
- Fee share held at **5.6%** as gross yield and onchain fees returned to growth.

Steakhouse's \$2.135B gross vault TVL centered on USDC, Base and Morpho.

Stablecoins represented **92%** of TVL; Base and Ethereum held **95.7%**, while Morpho accounted for **98.3%** at Q2 close.

Q2-close TVL by asset

Q2-close TVL by chain

Q2-close TVL by venue

- Stablecoins made up **92%** because Steakhouse's largest Prime and High Yield products are stablecoin vaults.
- Base and Ethereum held **95.7%**. Base alone reached **\$1.242B** after adding **\$489.2M** in Q2.
- April's Solana-wide risk-off move drove most of Kamino's Q2 decline (**-17%** total supply); Steakhouse USDC fell **\$35.6M** by April 30 following the Drift/UXD incident.
- Mellow's **\$26.6M** decline largely reflected the Lido DVV transition as standalone incentive flows were redirected into the Lido Earn ecosystem.

Gross vault TVL rose 280.6% from Q1 2025 close to \$2.135B at Q2 2026 close.

Q2 2026 delivered the second-largest quarterly increase in dollar terms after Q3 2025. Steakhouse's gross vault TVL grew by **\$318.1M** or **17.5%** during Q2 2026.

Source: DefiLlama, Kamino API; data retrieved August 26, 2026. Steakhouse vault TVL combines DefiLlama's non-Solana series with official Kamino Solana history. This is gross vault TVL, not net deposits or unique capital.

Base added \$489.2M and drove Steakhouse's Q2 TVL growth.

Its share of gross vault TVL rose from **41.4%** to **58.2%**. Stronger Morpho borrowing demand supported lending yields and Coinbase expanded access to Steakhouse vaults. June brought two major Base launches which attracted significant capital (Coinbase High Yield and Ethena x Steakhouse USDC).

Source: DefiLlama, Kamino API; data retrieved August 26, 2026. Chain changes compare Q2 opening and closing gross vault TVL. Steakhouse vault TVL combines DefiLlama's non-Solana series with official Kamino Solana history. This is gross vault TVL, not net deposits. Corn was deprecated in June 2026 and represented only ~\$17K of Q2-end TVL.

On Morpho, Prime remained dominant at 77.5% of deposits, while USDC rose to 74.8% of the asset mix.

High Yield added **\$111.5M**, while USDC added **\$144.7M** and remained the dominant asset; Prime declined **\$15.7M** and USDT fell **\$79M**.

Morpho V2 reached 52.6% of Steakhouse-curated Morpho deposits as users migrated from equivalent V1 vaults.

V2 deposits grew **182.1%** to **\$890.8M**; V1 deposits fell to **\$802.6M** and V2 passed V1 on June 25. Steakhouse began rolling out V2 vaults in late 2025 and formally accelerated user migration on April 9, 2026.

Source: Steakhouse App, Morpho API, Steakhouse Financial; Q2 ended June 30, 2026; data retrieved August 10, 2026. V2-specific rewards were already active before Q2. V1 balances held through V2 vaults are removed to avoid double counting.

Morpho deposits increased by \$93.8M as V2 growth more than offset the decline in V1.

Estimated deposit-and-withdrawal effects added \$105.4M before an \$11.6M residual from returns, asset-price changes and rounding.

Source: Steakhouse App, Morpho API; Q2 ended June 30, 2026; data retrieved August 10, 2026. V1 balances held by V2 vaults are removed before comparing version balances. Public data cannot separate migration activity from new deposits. The \$11.6M adjustment includes vault returns, asset prices and rounding.

Coinbase and Ethena accounted for 82.1% of balances across eight Q2-launched products.

The group of products held **\$224.5M** at quarter-end; the two June 11–12 launches reached **\$184.3M** in less than three weeks and carried much of **Base’s** growth in Q2.

Source: Morpho API, Steakhouse Financial and Trezor; Q2 ended June 30, 2026. Vault data retrieved August 10, 2026. The ranked chart includes V2 vaults launched during Q2 with at least \$10,000 at quarter-end. Vault balances show assets in partner-linked vaults, not verified partner-sourced deposits. Trezor combines its USDC and USDT vaults. Elwood and MetaMask launched in Q2, but have no separately attributable balance.

Depositing addresses rose 82.3% QoQ after activity accelerated in mid-June.

Q2 trailed Q1 through June 9, then added **13,635** addresses in the final three weeks; this coincided with the Coinbase High Yield and Ethena launches on June 11-12.

The full-quarter Morpho V2 sample returned **0.90%** excluding external incentives; High Yield led Prime by **0.16pp**.

The sample covered 93.2% of average V2 deposits; eight Q2-launched products were included in the coverage denominator but excluded from the return calculation because none had a full quarter of history.

Source: Morpho API, Kamino API; Q2 ended June 30, 2026; data retrieved August 10, 2026. Coverage equals average assets in full-quarter eligible vaults divided by average assets across all in-scope Morpho V2 vaults during Q2. Median is unweighted; weighted return uses average Q2 assets. Returns exclude external incentives to preserve comparability across vaults and venues.

Morpho vaults generated \$14.649M of gross yield during Q2; \$817,715, or 5.58%, accrued as onchain curator fees.

Public data does not disclose partner sharing, rebates, waivers, operating costs, or the cash Steakhouse ultimately retained.

Quarter	Gross yield	Depositor yield	Onchain curator fees	Curator fee share
Q1 2026	\$14.324M	\$13.519M	\$804,714	5.62%
Q2 2026	\$14.649M	\$13.831M	\$817,715	5.58%

Steakhouse ranked first in a selected eight-curator peer set for absolute Q2 TVL increase and gross yield.

Onchain curator fees ranked second even though only **5.58%** of gross yield accrued as fees, below the peer median; Steakhouse’s larger gross yield made up the difference.

Q2-End TVL

Q3 will be the first full quarter for several partner-launched vaults and new distribution integrations.

Trezor, Coinbase, Ethena, Elwood and MetaMask entered Q3 with new access points; Robinhood Earn and Kamino USDG High Yield followed in July.

Source: Trezor, Steakhouse Financial weekly updates, Steakhouse App and public onchain deployment records; data retrieved August 22, 2026. Subsequent events are shown for context and are excluded from Q2 performance.

Steakhouse ended Q2 larger, deeper into Morpho V2 and concentrated on Base.

Gross vault TVL reached **\$2.135B** as Base supplied all net growth, V2 became the majority of Morpho deposits and June launches widened distribution and access.

One chain created the net increase

Base added **\$489.2M** while every other chain combined declined by **\$171.2M**. The headline increase did not reflect a portfolio-wide rise.

Distribution widened late in the quarter

Eight Q2-launched products held **\$224.5M**, while depositing addresses rose **82.3%** QoQ after activity accelerated in mid-June.

Morpho V2 became the majority

V2 passed V1 on June 25 and ended with **52.6%** of Morpho deposits. Direct Morpho deposits grew **5.9%** through the transition.

Scale grew faster than economic output

Gross vault TVL rose **17.5%**, but Morpho gross yield increased **2.3%** and onchain curator fees rose **1.6%**; fee share held near **5.6%**.
